

---

The following document contains information on Cypress products. Although the document is marked with the name "Spansion", the company that originally developed the specification, Cypress will continue to offer these products to new and existing customers.

#### **Continuity of Specifications**

There is no change to this document as a result of offering the device as a Cypress product. Any changes that have been made are the result of normal document improvements and are noted in the document history page, where supported. Future revisions will occur when appropriate, and changes will be noted in a document history page.

#### **Continuity of Ordering Part Numbers**

Cypress continues to support existing part numbers. To order these products, please use only the Ordering Part Numbers listed in this document.

#### **For More Information**

Please contact your local sales office for additional information about Cypress products and solutions.

#### **About Cypress**

Cypress (NASDAQ: CY) delivers high-performance, high-quality solutions at the heart of today's most advanced embedded systems, from automotive, industrial and networking platforms to highly interactive consumer and mobile devices. With a broad, differentiated product portfolio that includes NOR flash memories, F-RAM™ and SRAM, Traveo™ microcontrollers, the industry's only PSoC® programmable system-on-chip solutions, analog and PMIC Power Management ICs, CapSense® capacitive touch-sensing controllers, and Wireless BLE Bluetooth® Low-Energy and USB connectivity solutions, Cypress is committed to providing its customers worldwide with consistent innovation, best-in-class support and exceptional system value.

MB9BF312N/R, MB9BF314N/R,  
MB9BF315N/R, MB9BF316N/R

*Data Sheet (Full Production)*

---

**Notice to Readers:** This document states the current technical specifications regarding the Spansion product(s) described herein. Spansion Inc. deems the products to have been in sufficient production volume such that subsequent versions of this document are not expected to change. However, typographical or specification corrections, or modifications to the valid combinations offered may occur.

## Notice On Data Sheet Designations

Spansion Inc. issues data sheets with Advance Information or Preliminary designations to advise readers of product information or intended specifications throughout the product life cycle, including development, qualification, initial production, and full production. In all cases, however, readers are encouraged to verify that they have the latest information before finalizing their design. The following descriptions of Spansion data sheet designations are presented here to highlight their presence and definitions.

### Advance Information

The Advance Information designation indicates that Spansion Inc. is developing one or more specific products, but has not committed any design to production. Information presented in a document with this designation is likely to change, and in some cases, development on the product may discontinue.

Spansion Inc. therefore places the following conditions upon Advance Information content:

“This document contains information on one or more products under development at Spansion Inc. The information is intended to help you evaluate this product. Do not design in this product without contacting the factory. Spansion Inc. reserves the right to change or discontinue work on this proposed product without notice.”

### Preliminary

The Preliminary designation indicates that the product development has progressed such that a commitment to production has taken place. This designation covers several aspects of the product life cycle, including product qualification, initial production, and the subsequent phases in the manufacturing process that occur before full production is achieved. Changes to the technical specifications presented in a Preliminary document should be expected while keeping these aspects of production under consideration. Spansion places the following conditions upon Preliminary content:

“This document states the current technical specifications regarding the Spansion product(s) described herein. The Preliminary status of this document indicates that product qualification has been completed, and that initial production has begun. Due to the phases of the manufacturing process that require maintaining efficiency and quality, this document may be revised by subsequent versions or modifications due to changes in technical specifications.”

### Combination

Some data sheets contain a combination of products with different designations (Advance Information, Preliminary, or Full Production). This type of document distinguishes these products and their designations wherever necessary, typically on the first page, the ordering information page, and pages with the DC Characteristics table and the AC Erase and Program table (in the table notes). The disclaimer on the first page refers the reader to the notice on this page.

### Full Production (No Designation on Document)

When a product has been in production for a period of time such that no changes or only nominal changes are expected, the Preliminary designation is removed from the data sheet. Nominal changes may include those affecting the number of ordering part numbers available, such as the addition or deletion of a speed option, temperature range, package type, or VIO range. Changes may also include those needed to clarify a description or to correct a typographical error or incorrect specification.

Spansion Inc. applies the following conditions to documents in this category:

“This document states the current technical specifications regarding the Spansion product(s) described herein. Spansion Inc. deems the products to have been in sufficient production volume such that subsequent versions of this document are not expected to change. However, typographical or specification corrections, or modifications to the valid combinations offered may occur.”

Questions regarding these document designations may be directed to your local sales office.

# FM3 MB9B310R Series

32-bit ARM® Cortex®-M3 based Microcontroller  
MB9BF312N/R, MB9BF314N/R,  
MB9BF315N/R, MB9BF316N/R

*Data Sheet (Full Production)*

---

## ■ Description

The MB9B310R Series are highly integrated 32-bit microcontrollers dedicated for embedded controllers with high-performance and competitive cost.

These series are based on the ARM Cortex-M3 Processor with on-chip Flash memory and SRAM, and has peripheral functions such as Motor Control Timers, ADCs and Communication Interfaces (USB, UART, CSIO, I<sup>2</sup>C, LIN).

The products which are described in this data sheet are placed into TYPE4 product categories in FM3 Family Peripheral Manual.

Note: ARM and Cortex are the registered trademarks of ARM Limited in the EU and other countries.

## ■ Features

- 32-bit ARM Cortex-M3 Core
  - Processor version: r2p1
  - Up to 144MHz Frequency Operation
  - Memory Protection Unit (MPU): improves the reliability of an embedded system
  - Integrated Nested Vectored Interrupt Controller (NVIC): 1 NMI (non-maskable interrupt) and 48 peripheral interrupts and 16 priority levels
  - 24-bit System timer (Sys Tick): System timer for OS task management

- On-chip Memories

### [Flash memory]

These series are based on two independent on-chip Flash memories.

- MainFlash
  - Up to 512 Kbyte
  - Built-in Flash Accelerator System with 16 Kbyte trace buffer memory
  - The read access to Flash memory can be achieved without wait cycle up to operation frequency of 72 MHz. Even at the operation frequency more than 72 MHz, an equivalent access to Flash memory can be obtained by Flash Accelerator System.
  - Security function for code protection
- WorkFlash
  - 32 Kbyte
  - Read cycle
    - 4wait-cycle: the operation frequency more than 72 MHz
    - 2wait-cycle: the operation frequency more than 40 MHz, and to 72 MHz
    - 0wait-cycle: the operation frequency to 40 MHz
  - Security function is shared with code protection

### [SRAM]

This Series contain a total of up to 64 Kbyte on-chip SRAM. This is composed of two independent SRAM (SRAM0, SRAM1). SRAM0 is connected to I-code bus and D-code bus of Cortex-M3 core. SRAM1 is connected to System bus.

- SRAM0: Up to 32 Kbyte
  - SRAM1: Up to 32 Kbyte
- External Bus Interface
    - Supports SRAM, NOR and NAND Flash device
    - Up to 8 chip selects
    - 8-/16-bit Data width
    - Up to 25-bit Address bit
    - Maximum area size : Up to 256 Mbytes
    - Supports Address/Data multiplex
    - Supports external RDY input

- **USB Interface**

USB interface is composed of Function and Host.

PLL for USB is built-in, USB clock can be generated by multiplication of Main clock.

[USB function]

- USB2.0 Full-Speed supported
- Max 6 EndPoint supported
  - EndPoint 0 is control transfer
  - EndPoint 1, 2 can be selected Bulk-transfer, Interrupt-transfer or Isochronous-transfer
  - EndPoint 3 to 5 can be selected Bulk-transfer or Interrupt-transfer
  - EndPoint 1 to 5 is comprised Double Buffer
  - The size of each EndPoint is as follows.
    - EndPoint 0, 2 to 5: 64 bytes
    - EndPoint 1: 256 bytes

[USB host]

- USB2.0 Full/Low-speed supported
- Bulk-transfer, interrupt-transfer and Isochronous-transfer support
- USB Device connected/dis-connected automatically detect
- IN/OUT token handshake packet automatically
- Max 256-byte packet-length supported
- Wake-up function supported

- **Multi-function Serial Interface (Max eight channels)**

- 4 channels with 16 steps×9-bit FIFO (ch.4 to ch.7), 4 channels without FIFO (ch.0 to ch.3)
- Operation mode is selectable from the followings for each channel.
  - UART
  - CSIO
  - LIN
  - I<sup>2</sup>C

[UART]

- Full-duplex double buffer
- Selection with or without parity supported
- Built-in dedicated baud rate generator
- External clock available as a serial clock
- Hardware Flow control : Automatically control the transmission by CTS/RTS (only ch.4)
- Various error detect functions available (parity errors, framing errors, and overrun errors)

[CSIO]

- Full-duplex double buffer
- Built-in dedicated baud rate generator
- Overrun error detect function available

[LIN]

- LIN protocol Rev.2.1 supported
- Full-duplex double buffer
- Master/Slave mode supported
- LIN break field generate (can be changed 13 to 16-bit length)
- LIN break delimiter generate (can be changed 1 to 4-bit length)
- Various error detect functions available (parity errors, framing errors, and overrun errors)

[I<sup>2</sup>C]

Standard-mode (Max 100 kbps) / Fast-mode (Max 400 kbps) supported

- **DMA Controller (Eight channels)**

DMA Controller has an independent bus for CPU, so CPU and DMA Controller can process simultaneously.

- 8 independently configured and operated channels
- Transfer can be started by software or request from the built-in peripherals
- Transfer address area: 32-bit (4 Gbyte)
- Transfer mode: Block transfer/Burst transfer/Demand transfer
- Transfer data type: byte/half-word/word
- Transfer block count: 1 to 16
- Number of transfers: 1 to 65536

- **A/D Converter (Max 16 channels)**

[12-bit A/D Converter]

- Successive Approximation Register type
- Built-in 3 unit
- Conversion time: 1.0  $\mu$ s @ 5 V
- Priority conversion available (priority at 2 levels)
- Scanning conversion mode
- Built-in FIFO for conversion data storage (for SCAN conversion: 16 steps, for Priority conversion: 4 steps)

- **Base Timer (Max eight channels)**

Operation mode is selectable from the followings for each channel.

- 16-bit PWM timer
- 16-bit PPG timer
- 16-/32-bit reload timer
- 16-/32-bit PWC timer

- **General Purpose I/O Port**

This series can use its pins as general purpose I/O ports when they are not used for external bus or peripherals. Moreover, the port relocate function is built in. It can set which I/O port the peripheral function can be allocated.

- Capable of pull-up control per pin
  - Capable of reading pin level directly
  - Built-in the port relocate function
  - Up 103 fast general purpose I/O Ports @ 120 pin Package
  - Some pin is 5 V tolerant I/O.
- See "■Pin Description" to confirm the corresponding pins.

- **Multi-function Timer (Max three units)**

The Multi-function timer is composed of the following blocks.

- 16-bit free-run timer × 3ch./unit
- Input capture × 4ch./unit
- Output compare × 6ch./unit
- A/D activating compare × 3ch./unit
- Waveform generator × 3ch./unit
- 16-bit PPG timer × 3ch./unit

The following function can be used to achieve the motor control.

- PWM signal output function
- DC chopper waveform output function
- Dead time function
- Input capture function
- A/D convertor activate function
- DTIF (Motor emergency stop) interrupt function

- **Real-time clock (RTC)**

The Real-time clock can count Year/Month/Day/Hour/Minute/Second/A day of the week from 01 to 99.

- Interrupt function with specifying date and time (Year/Month/Day/Hour/Minute/Second/A day of the week.) is available. This function is also available by specifying only Year, Month, Day, Hour or Minute.
- Timer interrupt function after set time or each set time.
- Capable of rewriting the time with continuing the time count.
- Leap year automatic count is available.

- **Quadrature Position/Revolution Counter (QPRC) (Max three channels)**

The Quadrature Position/Revolution Counter (QPRC) is used to measure the position of the position encoder. Moreover, it is possible to use up/down counter.

- The detection edge of the three external event input pins AIN, BIN and ZIN is configurable.
- 16-bit position counter
- 16-bit revolution counter
- Two 16-bit compare registers

- **Dual Timer (32-/16-bit Down Counter)**

The Dual Timer consists of two programmable 32-/16-bit down counters.

Operation mode is selectable from the followings for each channel.

- Free-running
- Periodic (=Reload)
- One-shot

- **Watch Counter**

The Watch counter is used for wake up from power consumption mode.

Interval timer: up to 64 s (Max) @ Sub Clock : 32.768 kHz

- External Interrupt Controller Unit
  - Up to 16 external interrupt input pin
  - Include one non-maskable interrupt (NMI)

- Watchdog Timer (Two channels)

A watchdog timer can generate interrupts or a reset when a time-out value is reached.

This series consists of two different watchdogs, a "Hardware" watchdog and a "Software" watchdog.

"Hardware" watchdog timer is clocked by low-speed internal CR oscillator. Therefore, "Hardware" watchdog is active in any power consumption mode except Stop mode.

- CRC (Cyclic Redundancy Check) Accelerator

The CRC accelerator helps a verify data transmission or storage integrity.

CCITT CRC16 and IEEE-802.3 CRC32 are supported.

- CCITT CRC16 Generator Polynomial: 0x1021
- IEEE-802.3 CRC32 Generator Polynomial: 0x04C11DB7

- Clock and Reset

[Clocks]

Five clock sources (2 external oscillators, 2 internal CR oscillator, and Main PLL) that are dynamically selectable.

- Main Clock: 4 MHz to 48 MHz
- Sub Clock: 32.768 kHz
- High-speed internal CR Clock: 4 MHz
- Low-speed internal CR Clock: 100 kHz
- Main PLL Clock

[Resets]

- Reset requests from INITX pin
- Power on reset
- Software reset
- Watchdog timers reset
- Low-voltage detector reset
- Clock supervisor reset

- Clock Super Visor (CSV)

Clocks generated by internal CR oscillators are used to supervise abnormality of the external clocks.

- External OSC clock failure (clock stop) is detected, reset is asserted.
- External OSC frequency anomaly is detected, interrupt or reset is asserted.

- **Low-Voltage Detector (LVD)**

This Series include 2-stage monitoring of voltage on the VCC pins. When the voltage falls below the voltage has been set, Low-Voltage Detector generates an interrupt or reset.

- LVD1: error reporting via interrupt
- LVD2: auto-reset operation

- **Low-Power Consumption Mode**

Three power consumption modes supported.

- Sleep
- Timer
- Stop

- **Debug**

- Serial Wire JTAG Debug Port (SWJ-DP)
- Embedded Trace Macrocells (ETM) provide comprehensive debug and trace facilities.

- **Power Supply**

Two Power Supplies

- Wide range voltage: VCC = 2.7 V to 5.5 V
- USB for USB I/O voltage: USBVCC = 3.0 V to 3.6 V (when USB is used)  
= 2.7 V to 5.5 V (when GPIO is used)

■ **Product Lineup**

● Memory size

Product name	MB9BF312N/R	MB9BF314N/R	MB9BF315N/R	MB9BF316R

WorkFlash	32 Kbyte	32 Kbyte	32 Kbyte	32 Kbyte
On-chip RAM	16 Kbyte	32 Kbyte	48 Kbyte	64 Kbyte
SRAM0	8 Kbyte	16 Kbyte	24 Kbyte	32 Kbyte
SRAM1	8 Kbyte	16 Kbyte	24 Kbyte	32 Kbyte

● Function

Product name		MB9BF312N MB9BF314N MB9BF315N MB9BF316N	MB9BF312R MB9BF314R MB9BF315R MB9BF316R
Pin count		100/112	120
CPU		Cortex-M3	
Freq.		144 MHz	
Power supply voltage range		VCC: 2.7 V to 5.5 V (USBVCC: 3.0 V to 3.6 V)	
USB2.0 (Function/Host)		1ch.	
DMAC		8ch.	
External Bus Interface		Addr: 25-bit (Max) R/Wdata: 8-/16-bit (Max) CS: 8 (Max) Support: SRAM, NOR Flash	Addr: 25-bit (Max) R/Wdata: 8-/16-bit (Max) CS: 8 (Max) Support: SRAM, NOR & NAND Flash
MF Serial Interface (UART/CSIO/LIN/I <sup>2</sup> C)		8ch. (Max) ch.4 to ch.7: FIFO (16steps × 9-bit) ch.0 to ch.3: No FIFO	
Base Timer (PWC/Reload timer/PWM/PPG)		8ch. (Max)	
MF-Timer	A/D activation compare	3ch.	3 units (Max)
	Input capture	4ch.	
	Free-run timer	3ch.	
	Output compare	6ch.	
	Waveform generator	3ch.	
	PPG	3ch.	
QPRC		3ch. (Max)	
Dual Timer		1 unit	
Real-Time Clock		1 unit	
Watch Counter		1 unit	
CRC Accelerator		Yes	
Watchdog timer		1ch. (SW) + 1ch. (HW)	
External Interrupts		16 pins (Max) + NMI × 1	
I/O ports		83 pins (Max)	103 pins (Max)
12-bit A/D converter		16ch. (3 units)	
CSV (Clock Super Visor)		Yes	
LVD (Low-Voltage Detector)		2ch.	
Internal OSC	High-speed	4 MHz	
	Low-speed	100 kHz	
Debug Function		SWJ-DP/ETM	

Note: All signals of the peripheral function in each product cannot be allocated by limiting the pins of package. It is necessary to use the port relocate function of the General I/O port according to your function use. See "■ Electrical Characteristics 4.AC Characteristics (3)Built-in CR Oscillation Characteristics" for accuracy of built-in CR.

## Pin Assignment

• FPT-100P-M23

### <Note>

The number after the underscore ("\_") in pin names such as XXX\_1 and XXX\_2 indicates the relocated port number. For these pins, there are multiple pins that provide the same function for the same channel. Use the extended port function register (EPFR) to select the pin.

• FPT-120P-M37

**<Note>**

The number after the underscore ("\_") in pin names such as XXX\_1 and XXX\_2 indicates the relocated port number. For these pins, there are multiple pins that provide the same function for the same channel. Use the extended port function register (EPFR) to select the pin.

• FPT-100P-M36

**<Note>**

The number after the underscore ("\_") in pin names such as XXX\_1 and XXX\_2 indicates the relocated port number. For these pins, there are multiple pins that provide the same function for the same channel. Use the extended port function register (EPFR) to select the pin.

• BGA-112P-M04

**<Note>**

The number after the underscore ("\_") in pin names such as XXX\_1 and XXX\_2 indicates the relocated port number. For these pins, there are multiple pins that provide the same function for the same channel. Use the extended port function register (EPFR) to select the pin.

## ■ List of Pin Functions

- List of pin numbers

The number after the underscore ("\_") in pin names such as XXX\_1 and XXX\_2 indicates the relocated port number. For these pins, there are multiple pins that provide the same function for the same channel. Use the extended port function register (EPFR) to select the pin.

• List of pin functions

The number after the underscore ("\_") in pin names such as XXX\_1 and XXX\_2 indicates the relocated port number. For these pins, there are multiple pins that provide the same function for the same channel. Use the extended port function register (EPFR) to select the pin.

The output node is also connected to a digital input signal through an inverter. The output node is labeled 'Digital output'.</p>	<ul style="list-style-type: none"> <li>• CMOS level output</li> <li>• CMOS level hysteresis input</li> <li>• With pull-up resistor control</li> <li>• With standby mode control</li> <li>• Pull-up resistor : Approximately 50 kΩ</li> <li>• <math>I_{OH} = -12 \text{ mA}</math>, <math>I_{OL} = 12 \text{ mA}</math></li> <li>• +B input is available</li> </ul>
H	<p>The diagram shows a complex logic circuit for selecting between USB I/O and GPIO functions. It includes several input signals: UDP/Pxx, Differential, and UDM/Pxx. The circuit uses a combination of inverters, NAND gates, and OR gates to generate various control signals. The outputs are labeled: GPIO Digital output, GPIO Digital input/output direction, GPIO Digital input, GPIO Digital input circuit control, UDP output, USB Full-speed/Low-speed control, UDP input, Differential input, USB/GPIO select, UDM input, UDM output, USB Digital input/output direction, GPIO Digital input, GPIO Digital input/output direction, and GPIO Digital input circuit control.</p>	<p>It is possible to select the USB I/O / GPIO function.</p> <p>When the USB I/O is selected.</p> <ul style="list-style-type: none"> <li>• Full-speed, Low-speed control</li> </ul> <p>When the GPIO is selected.</p> <ul style="list-style-type: none"> <li>• CMOS level output</li> <li>• CMOS level hysteresis input</li> <li>• With standby mode control</li> <li>• <math>I_{OH} = -20.5 \text{ mA}</math>, <math>I_{OL} = 18.5 \text{ mA}</math></li> </ul>

Type	Circuit	Remarks
I	<p>The diagram shows a CMOS output stage. A pull-up resistor R is connected to the output node. The output node is connected to the gates of a P-channel MOSFET (P-ch) and an N-channel MOSFET (N-ch). The P-ch MOSFET's source is connected to VDD, and its drain is connected to the output node. The N-ch MOSFET's source is connected to ground, and its drain is connected to the output node. A pull-up resistor control signal is connected to the gates of both MOSFETs. A standby mode control signal is connected to the gates of both MOSFETs through an AND gate. The output node is also connected to a digital input signal through an AND gate.</p>	<ul style="list-style-type: none"> <li>• CMOS level output</li> <li>• CMOS level hysteresis input</li> <li>• With pull-up resistor control</li> <li>• 5 V tolerant</li> <li>• With standby mode control</li> <li>• <math>I_{OH} = -4 \text{ mA}</math>, <math>I_{OL} = 4 \text{ mA}</math></li> <li>• Available to control of PZR registers.</li> <li>• When this pin is used as an I2C pin, the digital output P-ch transistor is always off</li> </ul>
J	<p>The diagram shows a CMOS level hysteresis input circuit. A pull-up resistor is connected to the input node. The input node is connected to the gates of two inverters. The output of the first inverter is connected to the input of the second inverter, forming a hysteresis loop. The output of the second inverter is connected to the Mode input.</p>	<p>CMOS level hysteresis input</p>

## ■ Handling Precautions

Any semiconductor devices have inherently a certain rate of failure. The possibility of failure is greatly affected by the conditions in which they are used (circuit conditions, environmental conditions, etc.). This page describes precautions that must be observed to minimize the chance of failure and to obtain higher reliability from your Spansion semiconductor devices.

### 1. Precautions for Product Design

This section describes precautions when designing electronic equipment using semiconductor devices.

- Absolute Maximum Ratings

Semiconductor devices can be permanently damaged by application of stress (voltage, current, temperature, etc.) in excess of certain established limits, called absolute maximum ratings. Do not exceed these ratings.

- Recommended Operating Conditions

Recommended operating conditions are normal operating ranges for the semiconductor device. All the device's electrical characteristics are warranted when operated within these ranges.

Always use semiconductor devices within the recommended operating conditions. Operation outside these ranges may adversely affect reliability and could result in device failure.

No warranty is made with respect to uses, operating conditions, or combinations not represented on the data sheet. Users considering application outside the listed conditions are advised to contact their sales representative beforehand.

- Processing and Protection of Pins

These precautions must be followed when handling the pins which connect semiconductor devices to power supply and input/output functions.

- (1) Preventing Over-Voltage and Over-Current Conditions

Exposure to voltage or current levels in excess of maximum ratings at any pin is likely to cause deterioration within the device, and in extreme cases leads to permanent damage of the device. Try to prevent such overvoltage or over-current conditions at the design stage.

- (2) Protection of Output Pins

Shorting of output pins to supply pins or other output pins, or connection to large capacitance can cause large current flows. Such conditions if present for extended periods of time can damage the device.

Therefore, avoid this type of connection.

- (3) Handling of Unused Input Pins

Unconnected input pins with very high impedance levels can adversely affect stability of operation. Such pins should be connected through an appropriate resistance to a power supply pin or ground pin.

- Latch-up

Semiconductor devices are constructed by the formation of P-type and N-type areas on a substrate. When subjected to abnormally high voltages, internal parasitic PNP junctions (called thyristor structures) may be formed, causing large current levels in excess of several hundred mA to flow continuously at the power supply pin. This condition is called latch-up.

**CAUTION:** The occurrence of latch-up not only causes loss of reliability in the semiconductor device, but can cause injury or damage from high heat, smoke or flame. To prevent this from happening, do the following:

- (1) Be sure that voltages applied to pins do not exceed the absolute maximum ratings. This should include attention to abnormal noise, surge levels, etc.

- (2) Be sure that abnormal current flows do not occur during the power-on sequence.

- **Observance of Safety Regulations and Standards**  
Most countries in the world have established standards and regulations regarding safety, protection from electromagnetic interference, etc. Customers are requested to observe applicable regulations and standards in the design of products.
- **Fail-Safe Design**  
Any semiconductor devices have inherently a certain rate of failure. You must protect against injury, damage or loss from such failures by incorporating safety design measures into your facility and equipment such as redundancy, fire protection, and prevention of over-current levels and other abnormal operating conditions.
- **Precautions Related to Usage of Devices**  
Spansion semiconductor devices are intended for use in standard applications (computers, office automation and other office equipment, industrial, communications, and measurement equipment, personal or household devices, etc.).

**CAUTION:** Customers considering the use of our products in special applications where failure or abnormal operation may directly affect human lives or cause physical injury or property damage, or where extremely high levels of reliability are demanded (such as aerospace systems, atomic energy controls, sea floor repeaters, vehicle operating controls, medical devices for life support, etc.) are requested to consult with sales representatives before such use. The company will not be responsible for damages arising from such use without prior approval.

## 2. Precautions for Package Mounting

Package mounting may be either lead insertion type or surface mount type. In either case, for heat resistance during soldering, you should only mount under Spansion's recommended conditions. For detailed information about mount conditions, contact your sales representative.

- **Lead Insertion Type**  
Mounting of lead insertion type packages onto printed circuit boards may be done by two methods: direct soldering on the board, or mounting by using a socket.  
  
Direct mounting onto boards normally involves processes for inserting leads into through-holes on the board and using the flow soldering (wave soldering) method of applying liquid solder. In this case, the soldering process usually causes leads to be subjected to thermal stress in excess of the absolute ratings for storage temperature. Mounting processes should conform to Spansion recommended mounting conditions.  
  
If socket mounting is used, differences in surface treatment of the socket contacts and IC lead surfaces can lead to contact deterioration after long periods. For this reason it is recommended that the surface treatment of socket contacts and IC leads be verified before mounting.
- **Surface Mount Type**  
Surface mount packaging has longer and thinner leads than lead-insertion packaging, and therefore leads are more easily deformed or bent. The use of packages with higher pin counts and narrower pin pitch results in increased susceptibility to open connections caused by deformed pins, or shorting due to solder bridges.  
  
You must use appropriate mounting techniques. Spansion recommends the solder reflow method, and has established a ranking of mounting conditions for each product. Users are advised to mount packages in accordance with Spansion ranking of recommended conditions.
- **Lead-Free Packaging**  
**CAUTION:** When ball grid array (BGA) packages with Sn-Ag-Cu balls are mounted using Sn-Pb eutectic soldering, junction strength may be reduced under some conditions of use.
- **Storage of Semiconductor Devices**  
Because plastic chip packages are formed from plastic resins, exposure to natural environmental conditions will cause absorption of moisture. During mounting, the application of heat to a package that has absorbed moisture can cause surfaces to peel, reducing moisture resistance and causing packages to crack. To prevent, do the following:

- (1) Avoid exposure to rapid temperature changes, which cause moisture to condense inside the product.

Store products in locations where temperature changes are slight.

- (2) Use dry boxes for product storage. Products should be stored below 70% relative humidity, and at temperatures between 5°C and 30°C.

When you open Dry Package that recommends humidity 40% to 70% relative humidity.

- (3) When necessary, Spansion packages semiconductor devices in highly moisture-resistant aluminum laminate bags, with a silica gel desiccant. Devices should be sealed in their aluminum laminate bags for storage.

- (4) Avoid storing packages where they are exposed to corrosive gases or high levels of dust.

- **Baking**

Packages that have absorbed moisture may be de-moisturized by baking (heat drying). Follow the Spansion recommended conditions for baking.

Condition: 125°C/24 h

- **Static Electricity**

Because semiconductor devices are particularly susceptible to damage by static electricity, you must take the following precautions:

- (1) Maintain relative humidity in the working environment between 40% and 70%. Use of an apparatus for ion generation may be needed to remove electricity.
- (2) Electrically ground all conveyors, solder vessels, soldering irons and peripheral equipment.
- (3) Eliminate static body electricity by the use of rings or bracelets connected to ground through high resistance (on the level of 1 MΩ).  
Wearing of conductive clothing and shoes, use of conductive floor mats and other measures to minimize shock loads is recommended.
- (4) Ground all fixtures and instruments, or protect with anti-static measures.
- (5) Avoid the use of styrofoam or other highly static-prone materials for storage of completed board assemblies.

### 3. Precautions for Use Environment

Reliability of semiconductor devices depends on ambient temperature and other conditions as described above.

For reliable performance, do the following:

(1) Humidity

Prolonged use in high humidity can lead to leakage in devices as well as printed circuit boards. If high humidity levels are anticipated, consider anti-humidity processing.

(2) Discharge of Static Electricity

When high-voltage charges exist close to semiconductor devices, discharges can cause abnormal operation. In such cases, use anti-static measures or processing to prevent discharges.

(3) Corrosive Gases, Dust, or Oil

Exposure to corrosive gases or contact with dust or oil may lead to chemical reactions that will adversely affect the device. If you use devices in such conditions, consider ways to prevent such exposure or to protect the devices.

(4) Radiation, Including Cosmic Radiation

Most devices are not designed for environments involving exposure to radiation or cosmic radiation. Users should provide shielding as appropriate.

(5) Smoke, Flame

**CAUTION:** Plastic molded devices are flammable, and therefore should not be used near combustible substances. If devices begin to smoke or burn, there is danger of the release of toxic gases.

Customers considering the use of Spansion products in other special environmental conditions should consult with sales representatives.

Please check the latest handling precautions at the following URL.

<http://www.spansion.com/fjdocuments/fj/datasheet/e-ds/DS00-00004.pdf>

■ Handling Devices

● Power supply pins

In products with multiple VCC and VSS pins, respective pins at the same potential are interconnected within the device in order to prevent malfunctions such as latch-up. However, all of these pins should be connected externally to the power supply or ground lines in order to reduce electromagnetic emission levels, to prevent abnormal operation of strobe signals caused by the rise in the ground level, and to conform to the total output current rating.

Moreover, connect the current supply source with each POWER pins and GND pins of this device at low impedance. It is also advisable that a ceramic capacitor of approximately 0.1 μF be connected as a bypass capacitor between each Power supply pin and GND pin, between AVCC pin and AVSS pin near this device.

● Stabilizing power supply voltage

A malfunction may occur when the power supply voltage fluctuates rapidly even though the fluctuation is within the recommended operating conditions of the VCC power supply voltage. As a rule, with voltage stabilization, suppress the voltage fluctuation so that the fluctuation in VCC ripple (peak-to-peak value) at the commercial frequency (50 Hz/60 Hz) does not exceed 10% of the VCC value in the recommended operating conditions, and the transient fluctuation rate does not exceed 0.1 V/μs when there is a momentary fluctuation on switching the power supply.

● Crystal oscillator circuit

Noise near the X0/X1 and X0A/X1A pins may cause the device to malfunction. Design the printed circuit board so that X0/X1, X0A/X1A pins, the crystal oscillator (or ceramic oscillator), and the bypass capacitor to ground are located as close to the device as possible.

It is strongly recommended that the PC board artwork be designed such that the X0/X1 and X0A/X1A pins are surrounded by ground plane as this is expected to produce stable operation.

Evaluate oscillation of your using crystal oscillator by your mount board.

● Using an external clock

When using an external clock, the clock signal should be input to the X0, X0A pin only and the X1, X1A pin should be kept open.

● Handling when using Multi function serial pin as I<sup>2</sup>C pin

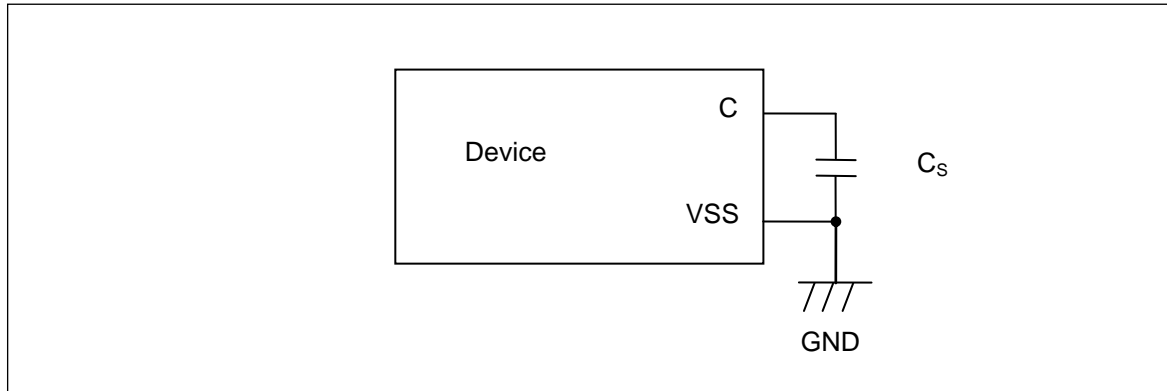

If it is using multi function serial pin as I<sup>2</sup>C pins, P-ch transistor of digital output is always disable. However, I<sup>2</sup>C pins need to keep the electrical characteristic like other pins and not to connect to external I<sup>2</sup>C bus system with power OFF.

● C Pin

This series contains the regulator. Be sure to connect a smoothing capacitor ( $C_s$ ) for the regulator between the C pin and the GND pin. Please use a ceramic capacitor or a capacitor of equivalent frequency characteristics as a smoothing capacitor.

However, some laminated ceramic capacitors have the characteristics of capacitance variation due to thermal fluctuation (F characteristics and Y5V characteristics). Please select the capacitor that meets the specifications in the operating conditions to use by evaluating the temperature characteristics of a capacitor.

A smoothing capacitor of about  $4.7\mu\text{F}$  would be recommended for this series.

● Mode pins (MD0)

Connect the MD pin (MD0) directly to VCC or VSS pins. Design the printed circuit board such that the pull-up/down resistance stays low, as well as the distance between the mode pins and VCC pins or VSS pins is as short as possible and the connection impedance is low, when the pins are pulled-up/down such as for switching the pin level and rewriting the Flash memory data. It is because of preventing the device erroneously switching to test mode due to noise.

● Notes on power-on

Turn power on/off in the following order or at the same time.

If not using the A/D converter, connect  $AVCC = VCC$  and  $AVSS = VSS$ .

Turning on :  $VCC \rightarrow USBVCC$

$VCC \rightarrow AVCC \rightarrow AVRH$

Turning off :  $USBVCC \rightarrow VCC$

$AVRH \rightarrow AVCC \rightarrow VCC$

● Serial Communication

There is a possibility to receive wrong data due to the noise or other causes on the serial communication.

Therefore, design a printed circuit board so as to avoid noise.

Consider the case of receiving wrong data due to noise, perform error detection such as by applying a checksum of data at the end. If an error is detected, retransmit the data.

● Differences in features among the products with different memory sizes and between Flash products and MASK products

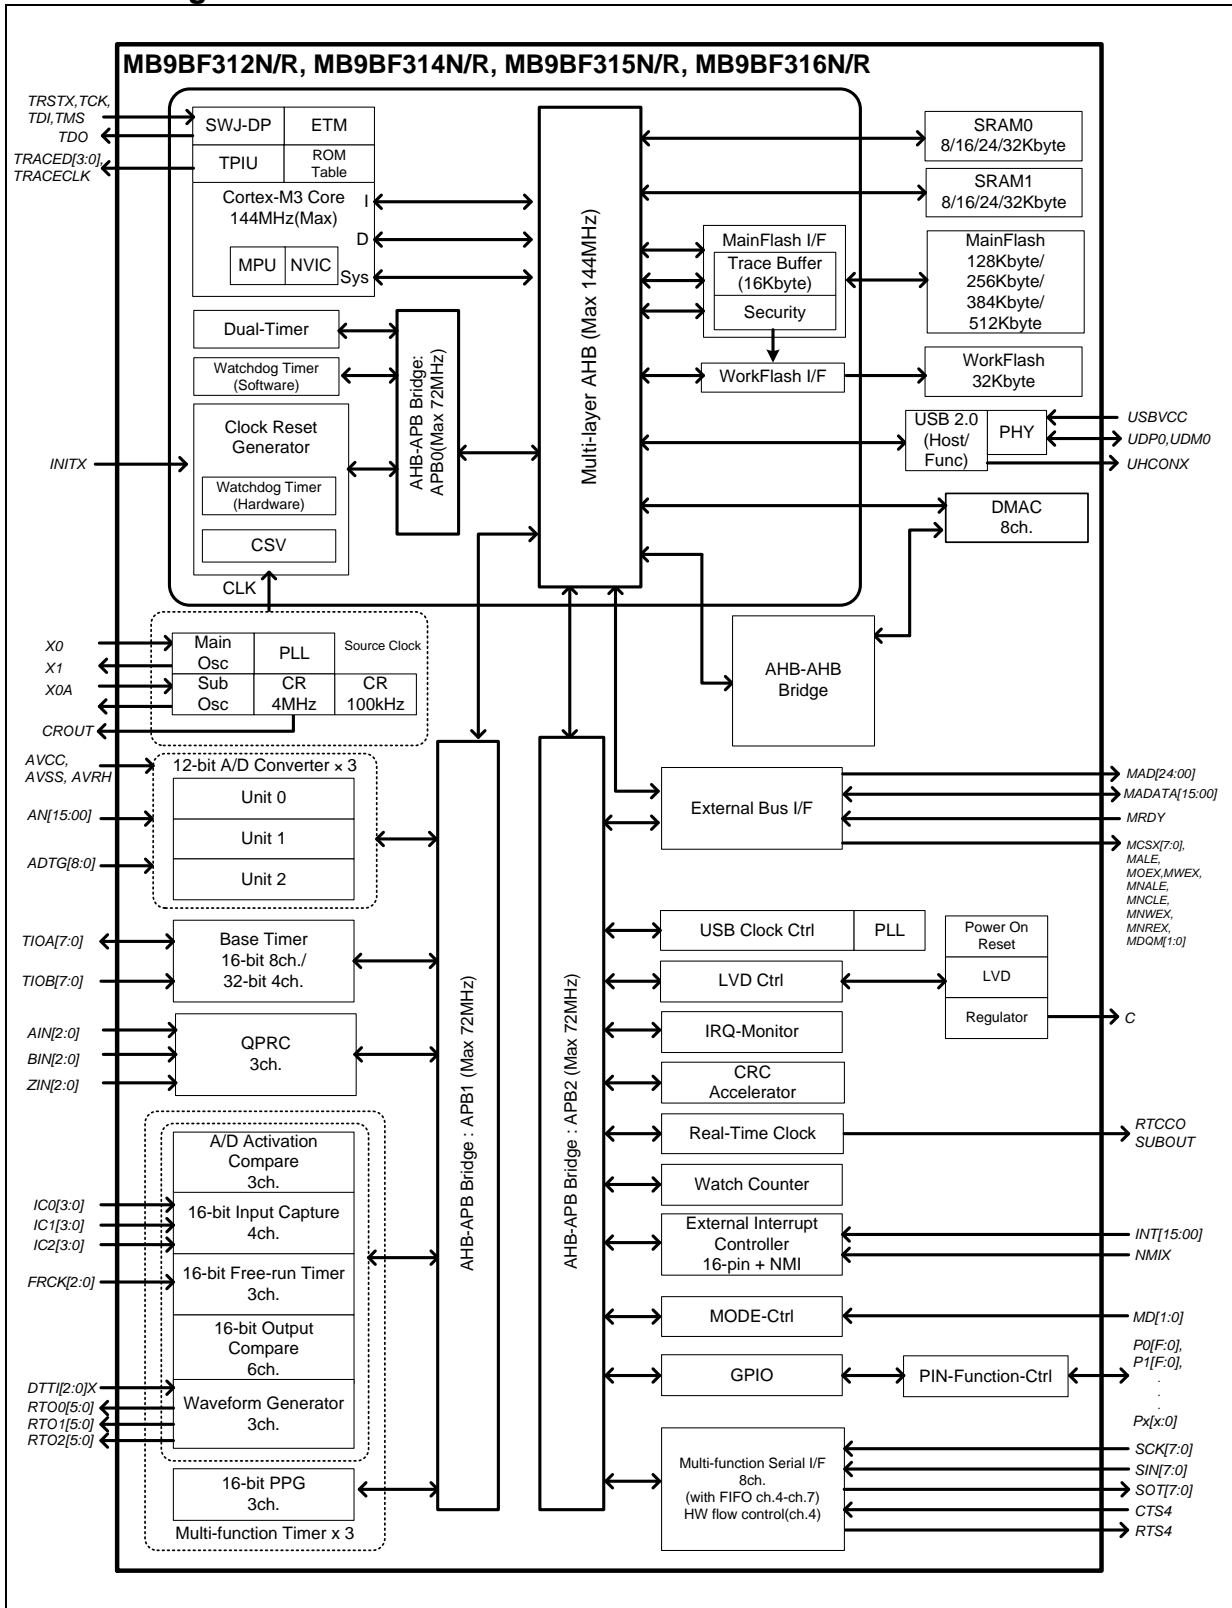

The electric characteristics including power consumption, ESD, latch-up, noise characteristics, and oscillation characteristics among the products with different memory sizes and between Flash products and MASK products are different because chip layout and memory structures are different.

If you are switching to use a different product of the same series, please make sure to evaluate the electric characteristics.

● Pull-Up function of 5 V tolerant I/O

Please do not input the signal more than VCC voltage at the time of Pull-Up function use of 5 V tolerant I/O.

■ Block Diagram

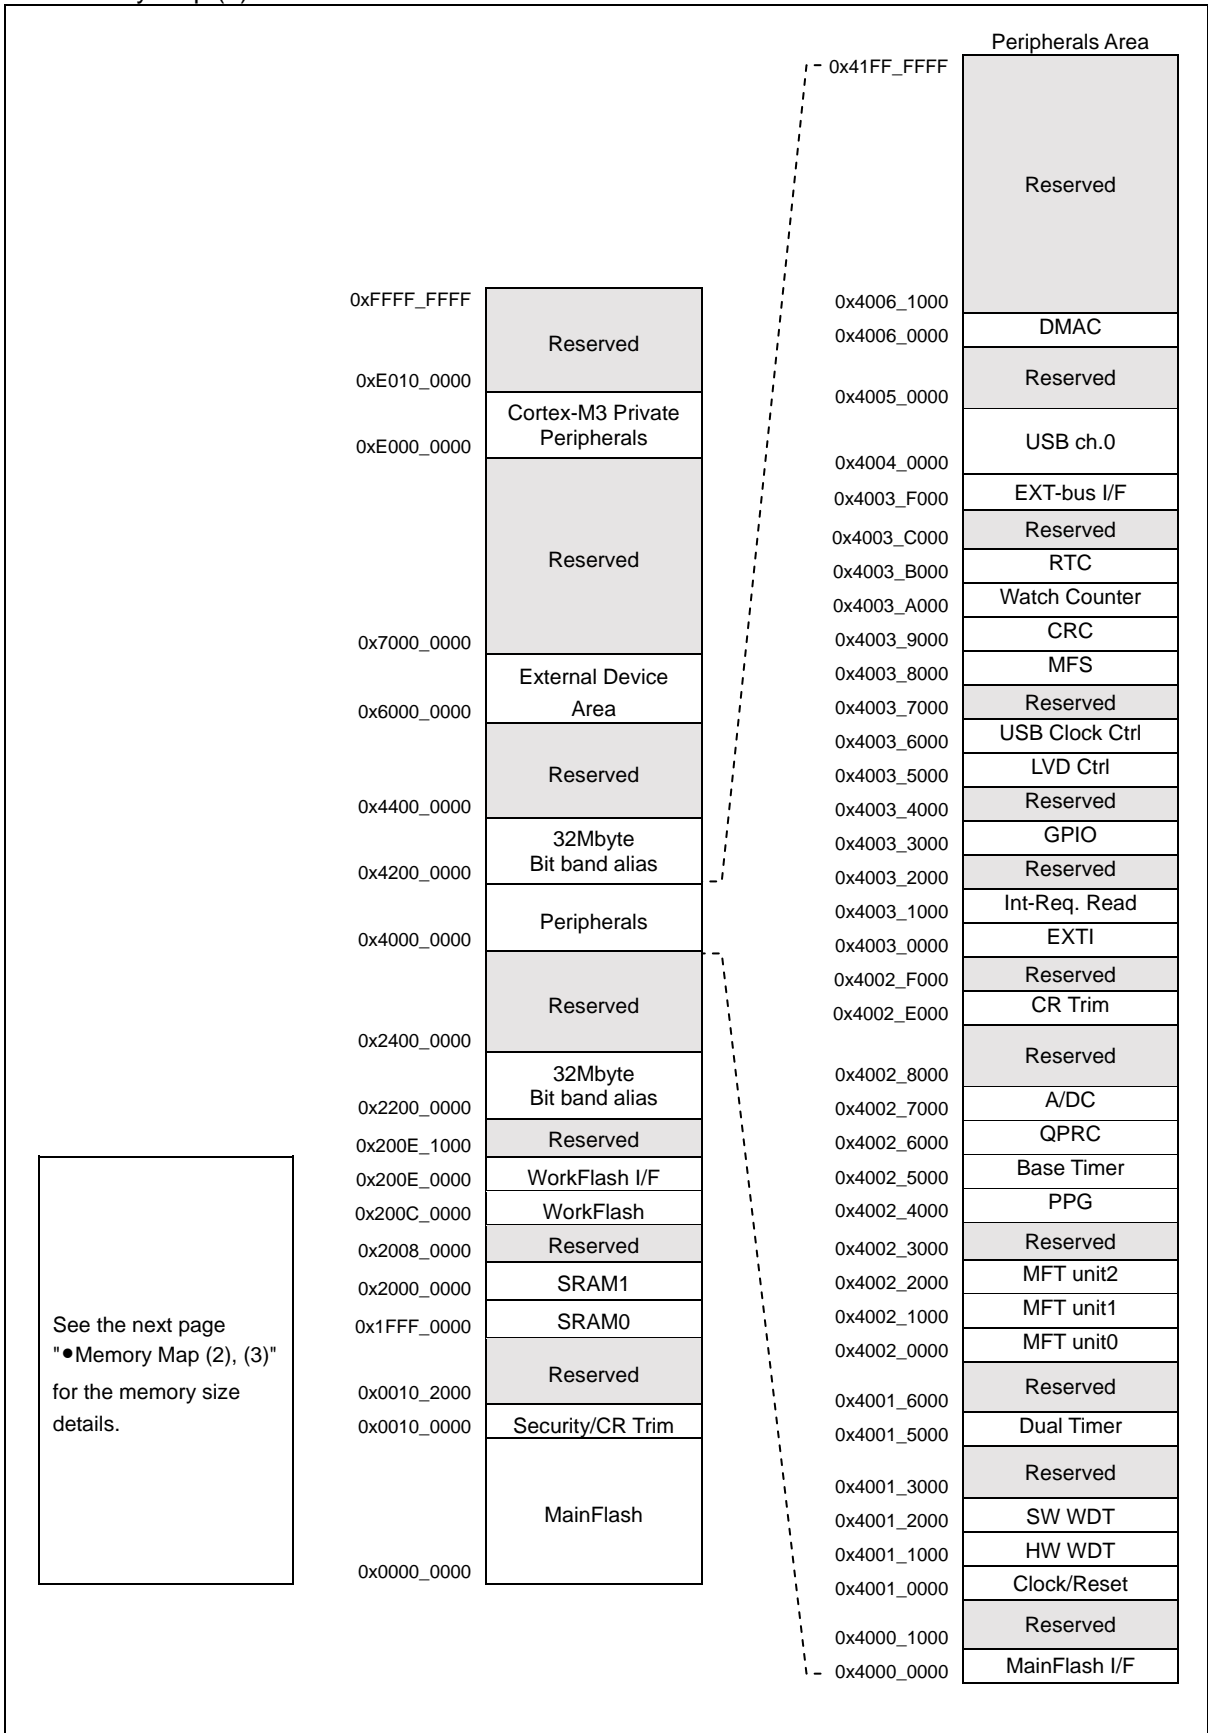

■ Memory Size

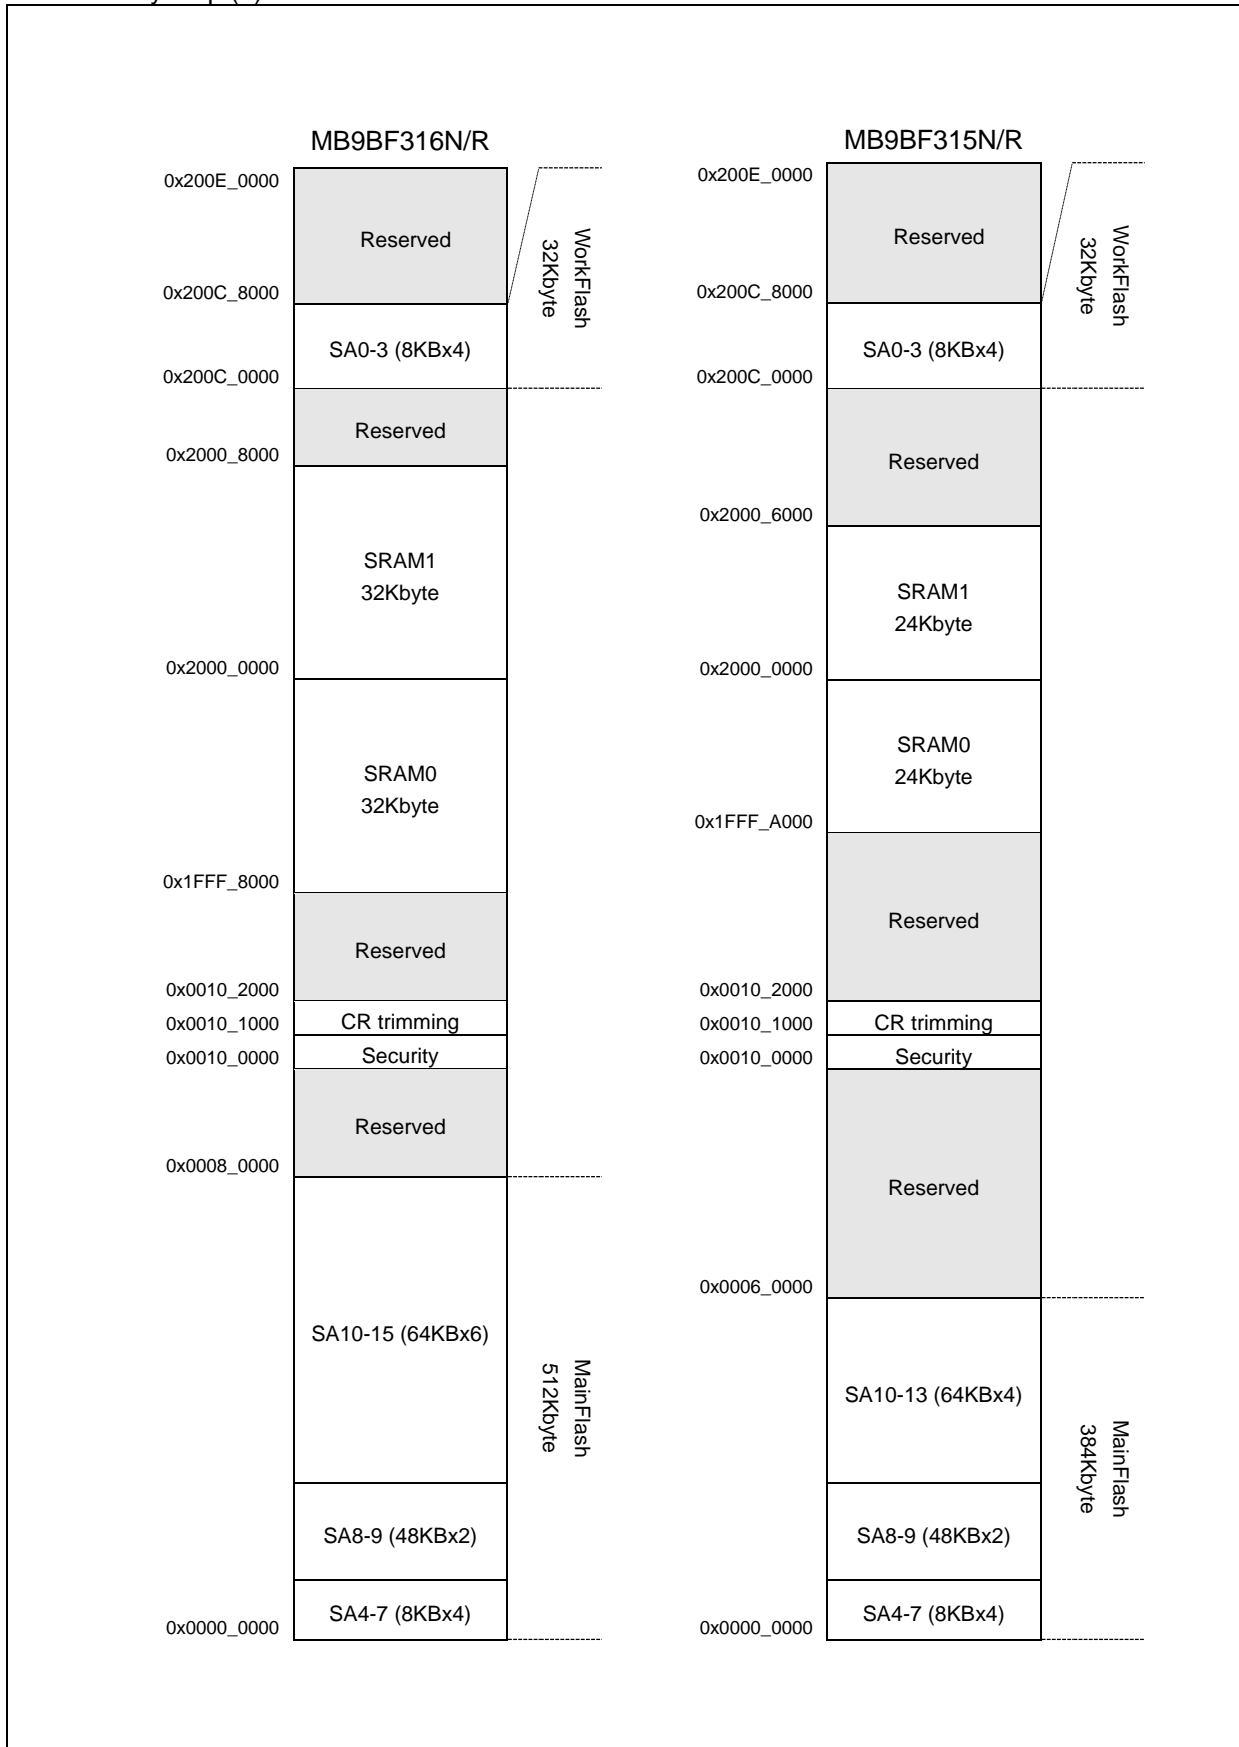

See "■Product Lineup" of " • Memory size" to confirm the memory size.

■ Memory Map

● Memory Map (1)

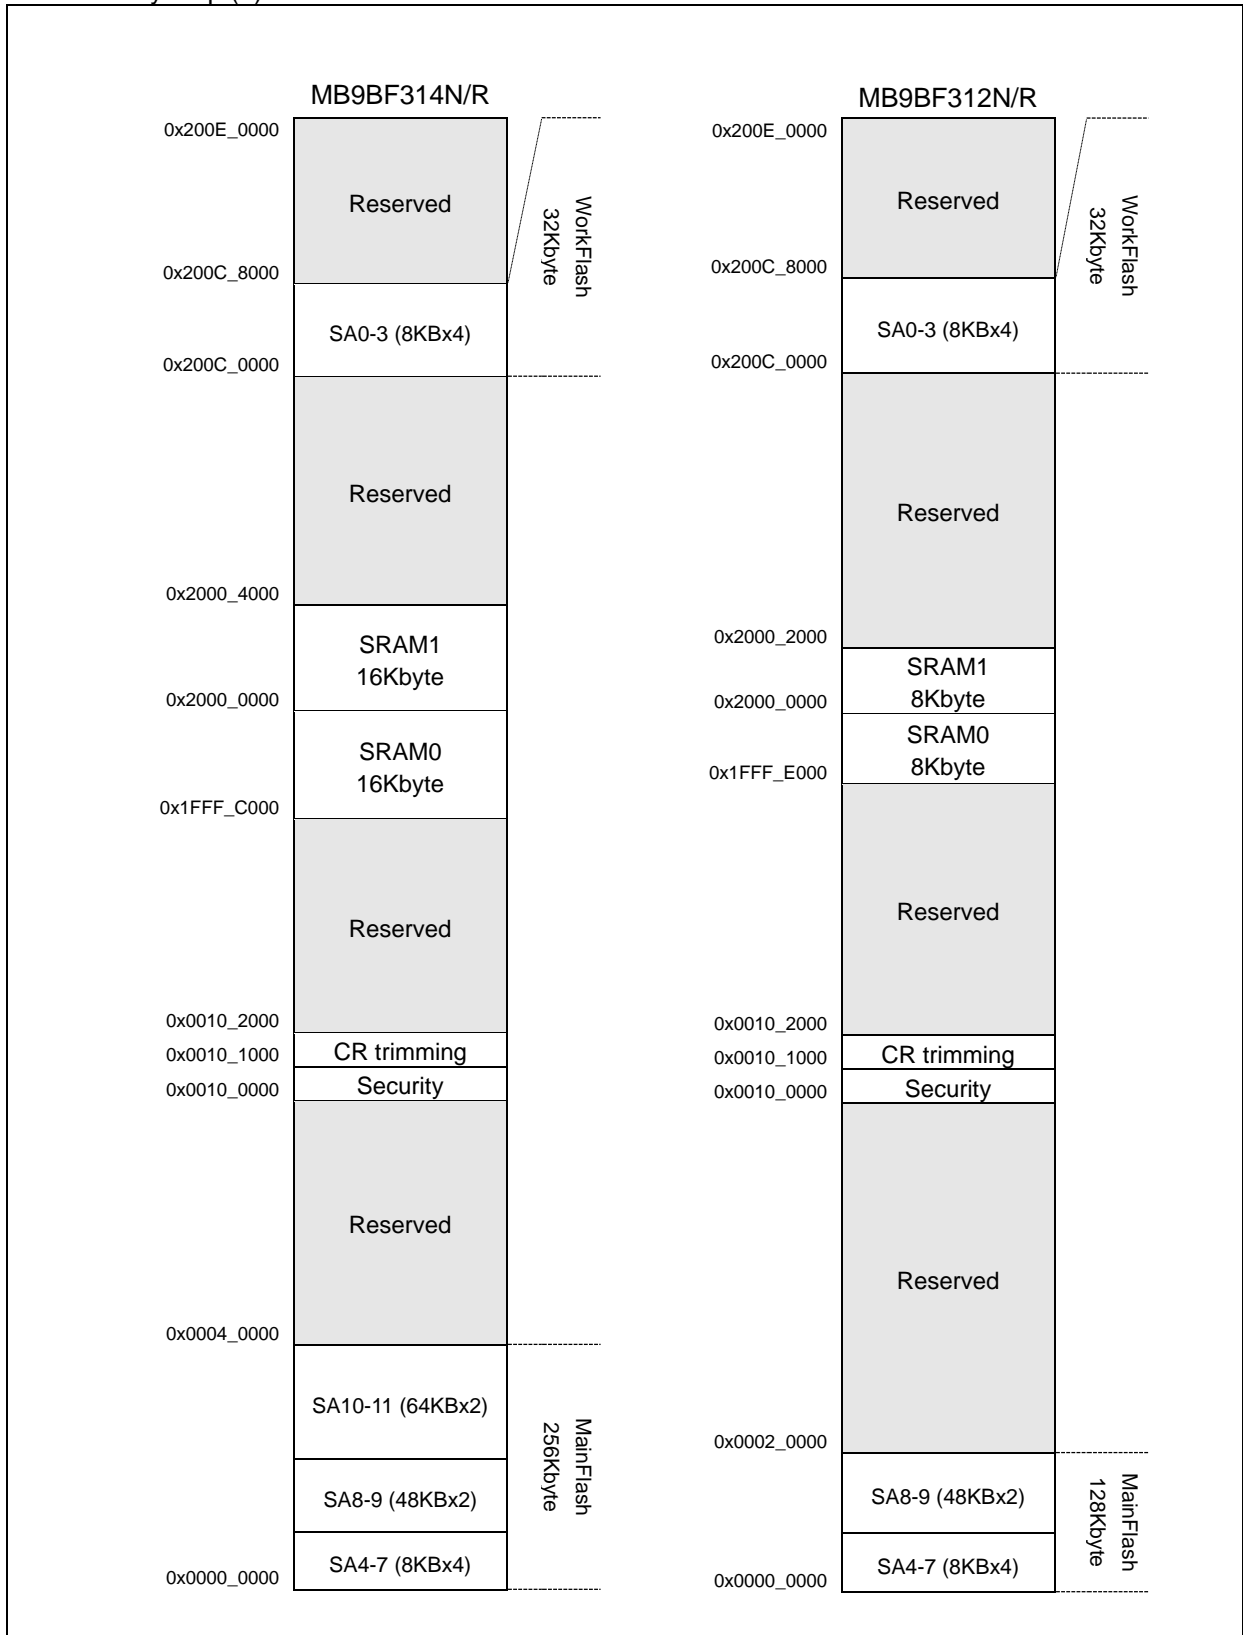

● Memory Map (2)

\*: See "MB9B510R/410R/310R/110R Series Flash programming Manual" for sector structure of Flash.

● Memory Map (3)

\*: See "MB9B510R/410R/310R/110R Series Flash programming Manual" for sector structure of Flash.

## ■ Pin Status in Each CPU State

The terms used for pin status have the following meanings.

- INITX=0  
This is the period when the INITX pin is the "L" level.
- INITX=1  
This is the period when the INITX pin is the "H" level.
- SPL=0  
This is the status that standby pin level setting bit (SPL) in standby mode control register (STB\_CTL) is set to "0".
- SPL=1  
This is the status that standby pin level setting bit (SPL) in standby mode control register (STB\_CTL) is set to "1".
- Input enabled  
Indicates that the input function can be used.
- Internal input fixed at "0"  
This is the status that the input function cannot be used. Internal input is fixed at "L".
- Hi-Z  
Indicates that the output drive transistor is disabled and the pin is put in the Hi-Z state.
- Setting disabled  
Indicates that the setting is disabled.
- Maintain previous state  
Maintains the state that was immediately prior to entering the current mode.  
If a built-in peripheral function is operating, the output follows the peripheral function.  
If the pin is being used as a port, that output is maintained.
- Analog input is enabled  
Indicates that the analog input is enabled.
- Trace output  
Indicates that the trace function can be used.

● List of Pin Status

Pin status type	Function group	Power-on reset or low-voltage detection state	INITX input state	Device internal reset state	Run mode or sleep mode state	Timer mode or sleep mode state	
		Power supply unstable	Power supply stable		Power supply stable	Power supply stable	
		-	INITX=0	INITX=1	INITX=1	INITX=1	
		-	-	-	-	SPL=0	SPL=1
A	GPIO selected	Setting disabled	Setting disabled	Setting disabled	Maintain previous state	Maintain previous state	Hi-Z/ Internal input fixed at "0"
	Main crystal oscillator input pin	Input enabled	Input enabled	Input enabled	Input enabled	Input enabled	Input enabled
B	GPIO selected	Setting disabled	Setting disabled	Setting disabled	Maintain previous state	Maintain previous state	Hi-Z/ Internal input fixed at "0"
	Main crystal oscillator output pin	Hi-Z/ Internal input fixed at "0"/ or Input enable	Hi-Z/ Internal input fixed at "0"	Hi-Z/ Internal input fixed at "0"	Maintain previous state	Maintain previous state/ Hi-Z at oscillation stop* <sup>1</sup> / Internal input fixed at "0"	Maintain previous state/ Hi-Z at oscillation stop* <sup>1</sup> / Internal input fixed at "0"
C	INITX input pin	Pull-up/ Input enabled	Pull-up/ Input enabled	Pull-up/ Input enabled	Pull-up/ Input enabled	Pull-up/ Input enabled	Pull-up/ Input enabled
D	Mode input pin	Input enabled	Input enabled	Input enabled	Input enabled	Input enabled	Input enabled
E	JTAG selected	Hi-Z	Pull-up/ Input enabled	Pull-up/ Input enabled	Maintain previous state	Maintain previous state	Maintain previous state
	GPIO selected	Setting disabled	Setting disabled	Setting disabled			Hi-Z/ Internal input fixed at "0"
F	Trace selected	Setting disabled	Setting disabled	Setting disabled	Maintain previous state	Maintain previous state	Trace output
	External interrupt enabled selected						Maintain previous state
	GPIO selected, or other than above resource selected	Hi-Z	Hi-Z/ Input enabled	Hi-Z/ Input enabled			Hi-Z/ Internal input fixed at "0"

Pin status type	Function group	Power-on reset or low-voltage detection state	INITX input state	Device internal reset state	Run mode or sleep mode state	Timer mode or sleep mode state	
		Power supply unstable	Power supply stable		Power supply stable	Power supply stable	
		-	INITX=0	INITX=1	INITX=1	INITX=1	
		-	-	-	-	SPL=0	SPL=1
G	Trace selected	Setting disabled	Setting disabled	Setting disabled	Maintain previous state	Maintain previous state	Trace output
	GPIO selected, or other than above resource selected	Hi-Z	Hi-Z/ Input enabled	Hi-Z/ Input enabled			Hi-Z/ Internal input fixed at "0"
H	External interrupt enabled selected	Setting disabled	Setting disabled	Setting disabled	Maintain previous state	Maintain previous state	Maintain previous state
	GPIO selected, or other than above resource selected	Hi-Z	Hi-Z/ Input enabled	Hi-Z/ Input enabled			Hi-Z/ Internal input fixed at "0"
I	GPIO selected, resource selected	Hi-Z	Hi-Z/ Input enabled	Hi-Z/ Input enabled	Maintain previous state	Maintain previous state	Hi-Z/ Internal input fixed at "0"
J	NMIX selected	Setting disabled	Setting disabled	Setting disabled	Maintain previous state	Maintain previous state	Maintain previous state
	GPIO selected, or other than above resource selected	Hi-Z	Hi-Z/ Input enabled	Hi-Z/ Input enabled			Hi-Z/ Internal input fixed at "0"

Pin status type	Function group	Power-on reset or low-voltage detection state	INITX input state	Device internal reset state	Run mode or sleep mode state	Timer mode or sleep mode state	
		Power supply unstable	Power supply stable		Power supply stable	Power supply stable	
		-	INITX=0	INITX=1	INITX=1	INITX=1	
		-	-	-	-	SPL=0	SPL=1

	Sub crystal oscillator output pin	Hi-Z/ Internal input fixed at "0"/ or Input enable	Hi-Z/ Internal input fixed at "0"	Hi-Z/ Internal input fixed at "0"	Maintain previous state	Maintain previous state/ Hi-Z at oscillation stop*2/ Internal input fixed at "0"	Maintain previous state/ Hi-Z at oscillation stop*2/ Internal input fixed at "0"
O	GPIO selected	Hi-Z	Hi-Z/ Input enabled	Hi-Z/ Input enabled	Maintain previous state	Maintain previous state	Hi-Z/ Internal input fixed at "0"
	USB I/O pin	Setting disabled	Setting disabled	Setting disabled	Maintain previous state	Hi-Z at transmission/ Input enabled/ Internal input fixed at "0" at reception	Hi-Z at transmission/ Input enabled/ Internal input fixed at "0" at reception
P	Mode input pin	Input enabled	Input enabled	Input enabled	Input enabled	Input enabled	Input enabled
	GPIO selected	Setting disabled	Setting disabled	Setting disabled	Maintain previous state	Maintain previous state	Hi-Z/ Input enabled

\*1: Oscillation is stopped at Sub Timer mode, Low-speed CR Timer mode, and Stop mode.

\*2: Oscillation is stopped at Stop mode.

## ■ Electrical Characteristics

### 1. Absolute Maximum Ratings

Parameter	Symbol	Rating		Unit	Remarks
		Min	Max		
Power supply voltage* <sup>1</sup> , * <sup>2</sup>	$V_{CC}$	$V_{SS} - 0.5$	$V_{SS} + 6.5$	V	
Power supply voltage (for USB)* <sup>1</sup> , * <sup>3</sup>	$USBV_{CC}$	$V_{SS} - 0.5$	$V_{SS} + 6.5$	V	
Analog power supply voltage* <sup>1</sup> , * <sup>4</sup>	$AV_{CC}$	$V_{SS} - 0.5$	$V_{SS} + 6.5$	V	
Analog reference voltage* <sup>1</sup> , * <sup>4</sup>	$AV_{RH}$	$V_{SS} - 0.5$	$V_{SS} + 6.5$	V	
Input voltage* <sup>1</sup>	$V_I$	$V_{SS} - 0.5$	$V_{CC} + 0.5$ ( $\leq 6.5$ V)	V	Except for USB pin
		$V_{SS} - 0.5$	$USBV_{CC} + 0.5$ ( $\leq 6.5$ V)	V	USB pin
		$V_{SS} - 0.5$	$V_{SS} + 6.5$	V	5 V tolerant
Analog pin input voltage* <sup>1</sup>	$V_{IA}$	$V_{SS} - 0.5$	$AV_{CC} + 0.5$ ( $\leq 6.5$ V)	V	
Output voltage* <sup>1</sup>	$V_O$	$V_{SS} - 0.5$	$V_{CC} + 0.5$ ( $\leq 6.5$ V)	V	
Clamp maximum current	$I_{CLAMP}$	-2	+2	mA	*8
Clamp total maximum current	$\sum [I_{CLAMP}]$		+20	mA	*8
L level maximum output current* <sup>5</sup>	$I_{OL}$	-	10	mA	4 mA type
			20	mA	12 mA type
			39	mA	P80, P81
L level average output current* <sup>6</sup>	$I_{OLAV}$	-	4	mA	4 mA type
			12	mA	12 mA type
			18.5	mA	P80, P81
L level total maximum output current	$\sum I_{OL}$	-	100	mA	
L level total average output current* <sup>7</sup>	$\sum I_{OLAV}$	-	50	mA	
H level maximum output current* <sup>5</sup>	$I_{OH}$	-	- 10	mA	4 mA type
			- 20	mA	12 mA type
			- 39	mA	P80, P81
H level average output current* <sup>6</sup>	$I_{OHAV}$	-	- 4	mA	4 mA type
			- 12	mA	12 mA type
			- 20.5	mA	P80, P81
H level total maximum output current	$\sum I_{OH}$	-	- 100	mA	
H level total average output current* <sup>7</sup>	$\sum I_{OHAV}$	-	- 50	mA	
Power consumption	$P_D$	-	1000	mW	
Storage temperature	$T_{STG}$	- 55	+ 150	°C	

\*1: These parameters are based on the condition that  $V_{SS} = AV_{SS} = 0.0$  V.

\*2:  $V_{CC}$  must not drop below  $V_{SS} - 0.5$  V.

\*3:  $USBV_{CC}$  must not drop below  $V_{SS} - 0.5$  V.

\*4: Ensure that the voltage does not exceed  $V_{CC} + 0.5$  V, for example, when the power is turned on.

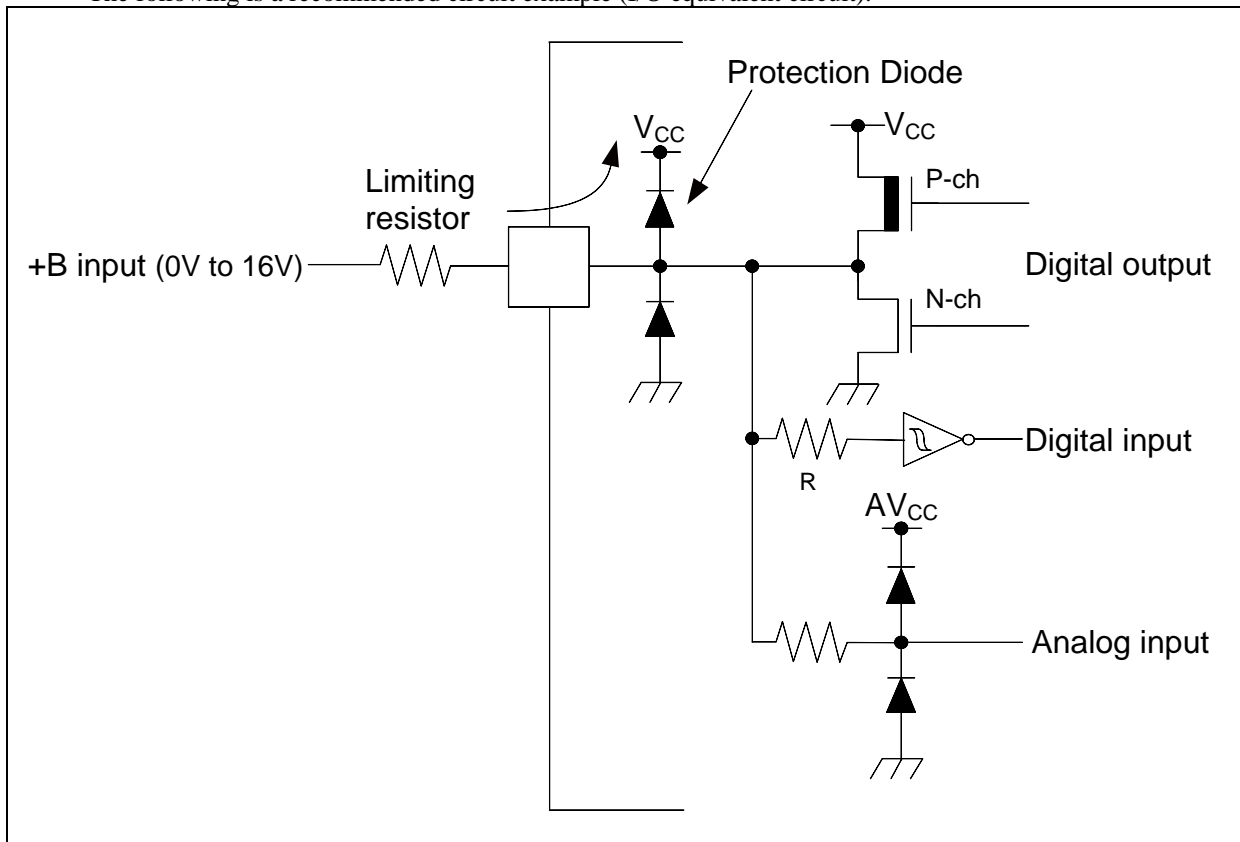

\*5: The maximum output current is the peak value for a single pin.

\*6: The average output is the average current for a single pin over a period of 100 ms.

\*7: The total average output current is the average current for all pins over a period of 100 ms.

\*8:

- See "■ List of Pin Functions" and "■ I/O Circuit Type" about +B input available pin.
- Use within recommended operating conditions.
- Use at DC voltage (current) the +B input.
- The +B signal should always be applied a limiting resistance placed between the +B signal and the device.
- The value of the limiting resistance should be set so that when the +B signal is applied the input current to the device pin does not exceed rated values, either instantaneously or for prolonged periods.
- Note that when the device drive current is low, such as in the low-power consumption modes, the +B input potential may pass through the protective diode and increase the potential at the VCC and AVCC pin, and this may affect other devices.
- Note that if a +B signal is input when the device power supply is off (not fixed at 0 V), the power supply is provided from the pins, so that incomplete operation may result.
- The following is a recommended circuit example (I/O equivalent circuit).

**<WARNING>**

Semiconductor devices can be permanently damaged by application of stress (voltage, current, temperature, etc.) in excess of absolute maximum ratings. Do not exceed these ratings.

## 2. Recommended Operating Conditions

( $V_{SS} = AV_{SS} = 0.0V$ )

Parameter	Symbol	Conditions	Value		Unit	Remarks	
			Min	Max			
Power supply voltage	$V_{CC}$	-	2.7	5.5	V		
Power supply voltage for USB ch.0	$USBV_{CC}$	-	3.0	3.6 ( $\leq V_{CC}$ )	V	*1	
			2.7	5.5 ( $\leq V_{CC}$ )		*2	
Analog power supply voltage	$AV_{CC}$	-	2.7	5.5	V	$AV_{CC} = V_{CC}$	
Analog reference voltage	$AV_{RH}$	-	2.7	$AV_{CC}$	V		
Smoothing capacitor	$C_S$	-	1	10	$\mu F$	For built-in regulator*3	
Operating temperature	FPT-100P-M20/M23 FPT-120P-M21/M37	$T_A$	When mounted on four-layer PCB	- 40	+ 85	$^{\circ}C$	
	FPT-100P-M36 BGA-112P-M04	$T_A$	-	- 40	+ 85	$^{\circ}C$	

\*1: When P81/UDP0 and P80/UDM0 pin are used as USB (UDP0, UDM0).

\*2: When P81/UDP0 and P80/UDM0 pin are used as GPIO (P81, P80).

### <WARNING>

The recommended operating conditions are required in order to ensure the normal operation of the semiconductor device. All of the device's electrical characteristics are warranted when the device is operated within these ranges.

Always use semiconductor devices within their recommended operating condition ranges. Operation outside these ranges may adversely affect reliability and could result in device failure. No warranty is made with respect to uses, operating conditions, or combinations not represented on the data sheet. Users considering application outside the listed conditions are advised to contact their representatives beforehand.

### 3. DC Characteristics

#### (1) Current Rating

( $V_{CC} = AV_{CC} = USBV_{CC} = 2.7V$  to  $5.5V$ ,  $V_{SS} = AV_{SS} = 0V$ ,  $T_A = -40^{\circ}C$  to  $+85^{\circ}C$ )

Parameter	Symbol	Pin name	Conditions	Value		Unit	Remarks
				Typ* <sup>3</sup>	Max* <sup>4</sup>		
Run mode current	$I_{CC}$	VCC	PLL Run mode CPU : 144 MHz, Peripheral : 72 MHz, Main Flash 2 Wait TraceBuffer : ON FRWTR.RWT = 10 FSYNDN.SD = 000 FBFCR.BE = 1	85	117	mA	*1, *5

Pull-up resistance value	$R_{PU}$	Pull-up pin	$V_{CC} \geq 4.5 \text{ V}$	25	50	100	$\text{k}\Omega$	
			$V_{CC} < 4.5 \text{ V}$	30	80	200		
Input capacitance	$C_{IN}$	Other than VCC, USBVCC, VSS, AVCC, AVSS, AVRH	-	-	5	15	pF	

#### 4. AC Characteristics

##### (1) Main Clock Input Characteristics

( $V_{CC} = 2.7V$  to  $5.5V$ ,  $V_{SS} = 0V$ ,  $T_A = -40^{\circ}C$  to  $+85^{\circ}C$ )

Parameter	Symbol	Pin name	Conditions	Value		Unit	Remarks	
				Min	Max			
Input frequency	$f_{CH}$	X0 X1	$V_{CC} \geq 4.5V$	4	48	MHz	When crystal oscillator is connected	
			$V_{CC} < 4.5V$	4	20			
			$V_{CC} \geq 4.5V$	4	48	MHz		
			$V_{CC} < 4.5V$	4	20			
Input clock cycle	$t_{CYLH}$		$V_{CC} \geq 4.5V$	20.83	250	ns	When using external clock	
			$V_{CC} < 4.5V$	50	250			
Input clock pulse width	-			$P_{WH}/t_{CYLH}$ $P_{WL}/t_{CYLH}$	45	55	%	When using external clock
Input clock rise time and fall time	$t_{CF}$ , $t_{CR}$			-	-	5	ns	When using external clock
Internal operating clock* <sup>1</sup> frequency	$f_{CM}$	-	-	-	144	MHz	Master clock	
	$f_{CC}$	-	-	-	144	MHz	Base clock (HCLK/FCLK)	
	$f_{CP0}$	-	-	-	72	MHz	APB0 bus clock* <sup>2</sup>	
	$f_{CP1}$	-	-	-	72	MHz	APB1 bus clock* <sup>2</sup>	
	$f_{CP2}$	-	-	-	72	MHz	APB2 bus clock* <sup>2</sup>	
Internal operating clock* <sup>1</sup> cycle time	$t_{CYCC}$	-	-	6.94	-	ns	Base clock (HCLK/FCLK)	
	$t_{CYCP0}$	-	-	13.8	-	ns	APB0 bus clock* <sup>2</sup>	
	$t_{CYCP1}$	-	-	13.8	-	ns	APB1 bus clock* <sup>2</sup>	
	$t_{CYCP2}$	-	-	13.8	-	ns	APB2 bus clock* <sup>2</sup>	

\*1: For more information about each internal operating clock, see CHAPTER 2-1: Clock in FM3 Family PERIPHERAL MANUAL.

\*2: For about each APB bus which each peripheral is connected to, see ■ Block Diagram in this data sheet.

(2) Sub Clock Input Characteristics

( $V_{CC} = 2.7V$  to  $5.5V$ ,  $V_{SS} = 0V$ ,  $T_A = -40^{\circ}C$  to  $+85^{\circ}C$ )

Parameter	Symbol	Pin name	Conditions	Value			Unit	Remarks
				Min	Typ	Max		
Input frequency	$1/t_{CYLL}$	X0A X1A	-	-	32.768	-	kHz	When crystal oscillator is connected
			-	32	-	100	kHz	When using external clock
Input clock cycle	$t_{CYLL}$		-	10	-	31.25	$\mu s$	When using external clock
Input clock pulse width	-		$P_{WH}/t_{CYLL}$ $P_{WL}/t_{CYLL}$	45	-	55	%	When using external clock

(3) Internal CR Oscillation Characteristics

- High-speed Internal CR

( $V_{CC} = 2.7V$  to  $5.5V$ ,  $V_{SS} = 0V$ ,  $T_A = -40^{\circ}C$  to  $+85^{\circ}C$ )

Parameter	Symbol	Conditions	Value			Unit	Remarks
			Min	Typ	Max		
Clock frequency	$f_{CRH}$	$T_A = +25^{\circ}C$	3.96	4	4.04	MHz	When trimming* <sup>1</sup>
		$T_A = 0^{\circ}C$ to $+70^{\circ}C$	3.84	4	4.16		
		$T_A = -40^{\circ}C$ to $+85^{\circ}C$	3.8	4	4.2		
		$T_A = -40^{\circ}C$ to $+85^{\circ}C$	3	4	5		When not trimming
Frequency stability time	$t_{CRWT}$	-	-	-	90	$\mu s$	* <sup>2</sup>

\*1: In the case of using the values in CR trimming area of Flash memory at shipment for frequency trimming.

\*2: Frequency stable time is time to stable of the frequency of the High-speed CR.

clock after the trim value is set. After setting the trim value, the period when the frequency stability time passes can use the High-speed CR clock as a source clock.

- Low-speed Internal CR

( $V_{CC} = 2.7V$  to  $5.5V$ ,  $V_{SS} = 0V$ ,  $T_A = -40^{\circ}C$  to  $+85^{\circ}C$ )

Parameter	Symbol	Conditions	Value			Unit	Remarks
			Min	Typ	Max		
Clock frequency	$f_{CRL}$	-	50	100	150	kHz	

(4-1) Operating Conditions of Main and USB PLL (In the case of using main clock for input of PLL)  
 ( $V_{CC} = 2.7V$  to  $5.5V$ ,  $V_{SS} = 0V$ ,  $T_A = -40^{\circ}C$  to  $+85^{\circ}C$ )

Parameter	Symbol	Value			Unit	Remarks
		Min	Typ	Max		
PLL oscillation stabilization wait time* <sup>1</sup> (LOCK UP time)	$t_{LOCK}$	100	-	-	$\mu s$	
PLL input clock frequency	$f_{PLLI}$	4	-	16	MHz	
PLL multiple rate	-	13	-	75	multiple	
PLL macro oscillation clock frequency	$f_{PLLO}$	200	-	300	MHz	
Main PLL clock frequency* <sup>2</sup>	$f_{CLKPLL}$	-	-	40	MHz	
USB clock frequency* <sup>3</sup>	$f_{CLKSPLL}$	-	-	48	MHz	After the M frequency division

\*1: Time from when the PLL starts operating until the oscillation stabilizes.

\*2: For more information about Main PLL clock (CLKPLL), see CHAPTER 2-1: Clock in FM3 Family PERIPHERAL MANUAL.

\*3: For more information about USB clock, see CHAPTER 2-2: USB Clock Generation in FM3 Family PERIPHERAL MANUAL Communication Macro Part.

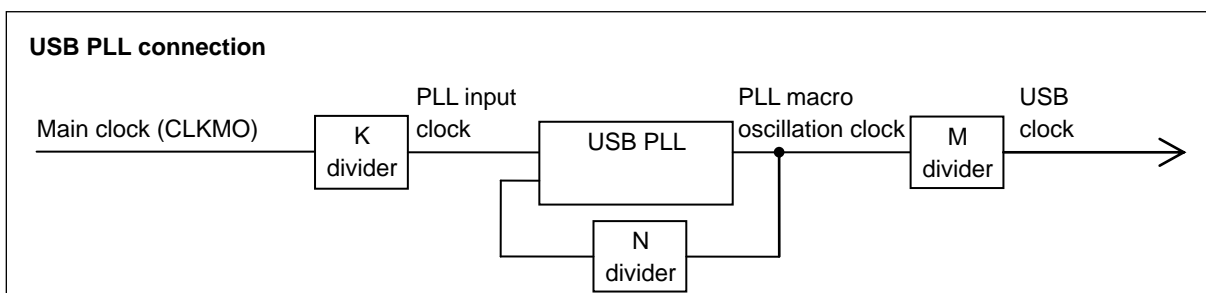

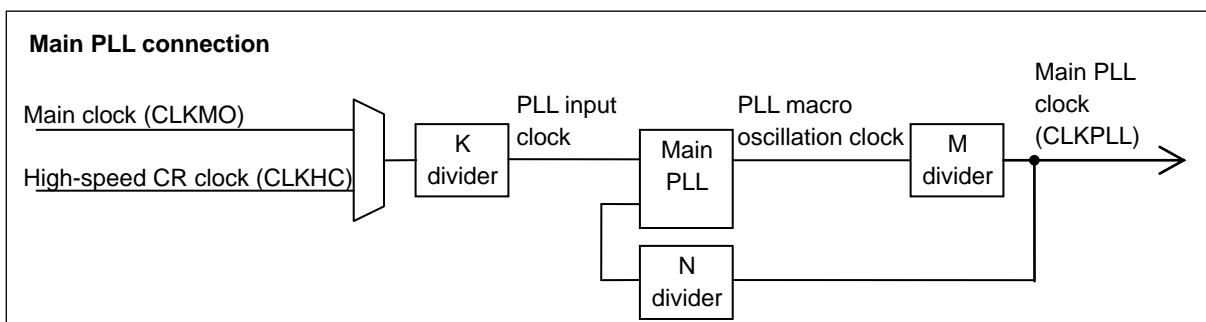

(4-2) Operating Conditions of Main PLL (In the case of using high-speed internal CR)  
 ( $V_{CC} = 2.7V$  to  $5.5V$ ,  $V_{SS} = 0V$ ,  $T_A = -40^{\circ}C$  to  $+85^{\circ}C$ )

Parameter	Symbol	Value			Unit	Remarks
		Min	Typ	Max		
PLL oscillation stabilization wait time* <sup>1</sup> (LOCK UP time)	$t_{LOCK}$	100	-	-	$\mu s$	
PLL input clock frequency	$f_{PLLI}$	3.8	4	4.2	MHz	
PLL multiple rate	-	50	-	71	multiple	
PLL macro oscillation clock frequency	$f_{PLLO}$	190	-	300	MHz	
Main PLL clock frequency* <sup>2</sup>	$f_{CLKPLL}$	-	-	40	MHz	

\*1: Time from when the PLL starts operating until the oscillation stabilizes.

\*2: For more information about Main PLL clock (CLKPLL), see CHAPTER 2-1: Clock in FM3 Family PERIPHERAL MANUAL.

When setting PLL multiple rate, please take the accuracy of the built-in high-speed CR clock into account and prevent the master clock from exceeding the maximum frequency.

(5) Reset Input Characteristics

( $V_{CC} = 2.7V$  to  $5.5V$ ,  $V_{SS} = 0V$ ,  $T_A = -40^{\circ}C$  to  $+85^{\circ}C$ )

Parameter	Symbol	Pin name	Conditions	Value		Unit	Remarks
				Min	Max		
Reset input time	$t_{INITX}$	INITX	-	500	-	ns	

(6) Power-on Reset Timing

( $V_{CC} = 2.7V$  to  $5.5V$ ,  $V_{SS} = 0V$ ,  $T_A = -40^{\circ}C$  to  $+85^{\circ}C$ )

Parameter	Symbol	Pin name	Value		Unit	Remarks
			Min	Max		
Power supply rising time	$t_{VCCR}$	VCC	0	-	ms	
Power supply shut down time	$t_{OFF}$		1	-	ms	
Time until releasing Power-on reset	$t_{PRT}$		0.57	0.76	ms	

Glossary

- VCC\_minimum : Minimum  $V_{CC}$  of recommended operating conditions
- VDH\_minimum : Minimum release voltage of Low-Voltage detection reset.  
See 7. Low-Voltage Detection Characteristics

(7) External Bus Timing

- External bus clock output characteristics

( $V_{CC} = 2.7V$  to  $5.5V$ ,  $V_{SS} = 0V$ ,  $T_A = -40^{\circ}C$  to  $+85^{\circ}C$ )

Parameter	Symbol	Pin name	Conditions	Value		Unit
				Min	Max	
Output frequency	$t_{CYCLE}$	MCLKOUT*1	$V_{CC} \geq 4.5 V$	-	$50^{*2}$	MHz
			$V_{CC} < 4.5 V$	-	$32^{*3}$	MHz

\*1: External bus clock (MCLKOUT) is divided clock of HCLK.

For more information about setting of clock divider, see CHAPTER 12: External Bus Interface in FM3 Family PERIPHERAL MANUAL.

When external bus clock is not output, this characteristic does not give any effect on external bus operation.

\*2: When AHB bus clock frequency is more than 100MHz, the divider setting for MCLKOUT must be more than 4.

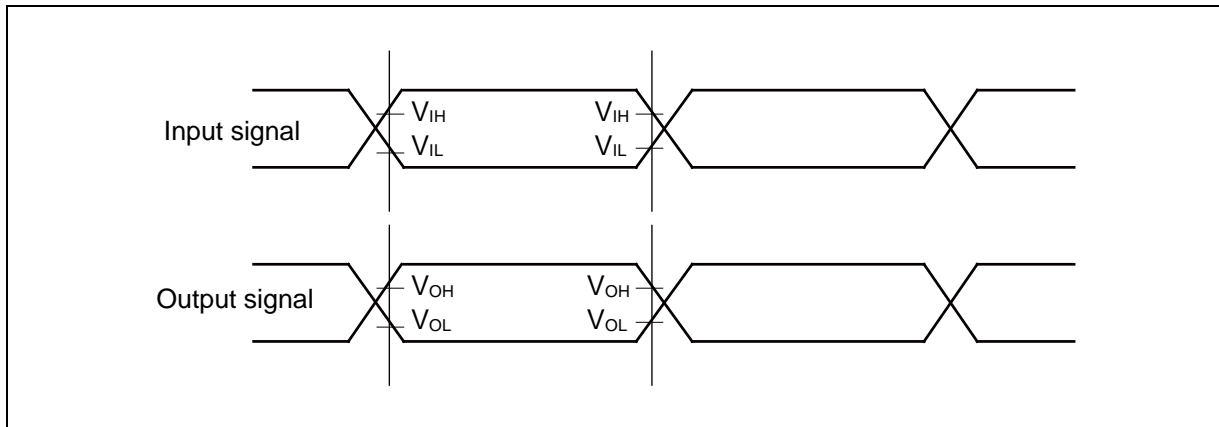

\*3: When AHB bus clock frequency is more than 64MHz, the divider setting for MCLKOUT must be more than 4.

- External bus signal input/output Characteristics

( $V_{CC} = 2.7V$  to  $5.5V$ ,  $V_{SS} = 0V$ ,  $T_A = -40^{\circ}C$  to  $+85^{\circ}C$ )

Parameter	Symbol	Conditions	Value	Unit	Remarks
Signal input characteristics	$V_{IH}$	-	$0.8 \times V_{CC}$	V	
	$V_{IL}$		$0.2 \times V_{CC}$	V	
Signal output characteristics	$V_{OH}$	-	$0.8 \times V_{CC}$	V	
	$V_{OL}$		$0.2 \times V_{CC}$	V	

• Separate Bus Access Asynchronous SRAM Mode

( $V_{CC} = 2.7V$  to  $5.5V$ ,  $V_{SS} = 0V$ ,  $T_A = -40^{\circ}C$  to  $+85^{\circ}C$ )

Parameter	Symbol	Pin name	Conditions	Value		Unit
				Min	Max	
MOEX Min pulse width	$t_{OE\overline{W}}$	MOEX	$V_{CC} \geq 4.5V$ $V_{CC} < 4.5V$	MCLK $\times$ n-3	-	ns

Note: When the external load capacitance = 30 pF. (m=0 to 15, n=1 to 16)

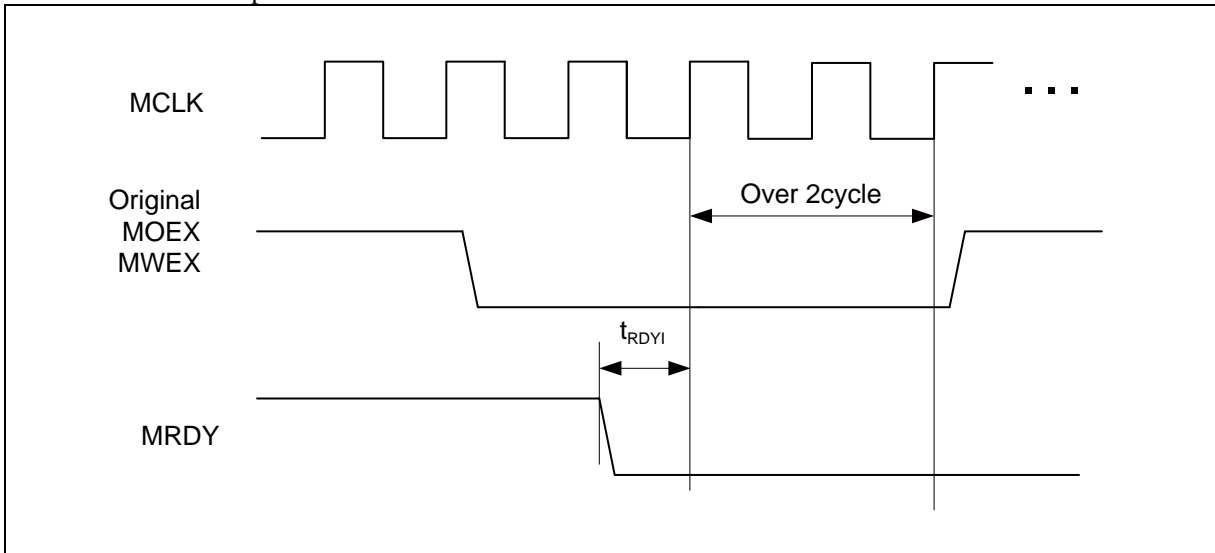

• External Ready Input Timing

( $V_{CC} = 2.7V$  to  $5.5V$ ,  $V_{SS} = 0V$ ,  $T_A = -40^{\circ}C$  to  $+85^{\circ}C$ )

Parameter	Symbol	Pin name	Conditions	Value		Unit	Remarks
				Min	Max		
MCLK $\uparrow$ MRDY input setup time	$t_{RDYI}$	MCLK MRDY	$V_{CC} \geq 4.5V$	19	-	ns	
			$V_{CC} < 4.5V$	37			

• When RDY is input

• When RDY is released

(8) Base Timer Input Timing

- Timer input timing

( $V_{CC} = 2.7V$  to  $5.5V$ ,  $V_{SS} = 0V$ ,  $T_A = -40^{\circ}C$  to  $+85^{\circ}C$ )

Parameter	Symbol	Pin name	Conditions	Value		Unit	Remarks
				Min	Max		
Input pulse width	$t_{TIWH}$ $t_{TIWL}$	TIOAn/TIOBn (when using as ECK, TIN)	-	$2t_{CYCP}$	-	ns	

- Trigger input timing

( $V_{CC} = 2.7V$  to  $5.5V$ ,  $V_{SS} = 0V$ ,  $T_A = -40^{\circ}C$  to  $+85^{\circ}C$ )

Parameter	Symbol	Pin name	Conditions	Value		Unit	Remarks
				Min	Max		
Input pulse width	$t_{TRGH}$ $t_{TRGL}$	TIOAn/TIOBn (when using as TGIN)	-	$2t_{CYCP}$	-	ns	

Note:  $t_{CYCP}$  indicates the APB bus clock cycle time.

About the APB bus number which Base Timer is connected to, see ■ Block Diagram in this data sheet.

(9) CSIO/UART Timing  
 • CSIO (SPI = 0, SCINV = 0)

( $V_{CC} = 2.7V$  to  $5.5V$ ,  $V_{SS} = 0V$ ,  $T_A = -40^{\circ}C$  to  $+85^{\circ}C$ )

Parameter	Symbol	Pin name	Conditions	$V_{CC} < 4.5 V$		$V_{CC} \geq 4.5 V$		Unit
				Min	Max	Min	Max	
Serial clock cycle time	$t_{SCYC}$	SCK <sub>X</sub>	Master mode	$4t_{CYCP}$	-	$4t_{CYCP}$	-	ns
SCK ↓ → SOT delay time	$t_{SLOVI}$	SCK <sub>X</sub> SOT <sub>X</sub>		-30	+30	-20	+20	ns
SIN → SCK ↑ setup time	$t_{VSHI}$	SCK <sub>X</sub> SIN <sub>X</sub>		50	-	30	-	ns
SCK ↑ → SIN hold time	$t_{SHIXI}$	SCK <sub>X</sub> SIN <sub>X</sub>		0	-	0	-	ns
Serial clock L pulse width	$t_{SLSH}$	SCK <sub>X</sub>	Slave mode	$2t_{CYCP} - 10$	-	$2t_{CYCP} - 10$	-	ns
Serial clock H pulse width	$t_{SHSL}$	SCK <sub>X</sub>		$t_{CYCP} + 10$	-	$t_{CYCP} + 10$	-	ns
SCK ↓ → SOT delay time	$t_{SLOVE}$	SCK <sub>X</sub> SOT <sub>X</sub>		-	50	-	30	ns
SIN → SCK ↑ setup time	$t_{VSHI}$	SCK <sub>X</sub> SIN <sub>X</sub>		10	-	10	-	ns
SCK ↑ → SIN hold time	$t_{SHIXE}$	SCK <sub>X</sub> SIN <sub>X</sub>		20	-	20	-	ns
SCK fall time	$t_F$	SCK <sub>X</sub>		-	5	-	5	ns
SCK rise time	$t_R$	SCK <sub>X</sub>		-	5	-	5	ns

- Notes:
- The above characteristics apply to CLK synchronous mode.
  - $t_{CYCP}$  indicates the APB bus clock cycle time.  
 About the APB bus number which Multi-function Serial is connected to, see ■Block Diagram in this data sheet.
  - These characteristics only guarantee the same relocate port number.  
 For example, the combination of SCK<sub>x\_0</sub> and SOT<sub>x\_1</sub> is not guaranteed.
  - When the external load capacitance = 30 pF.

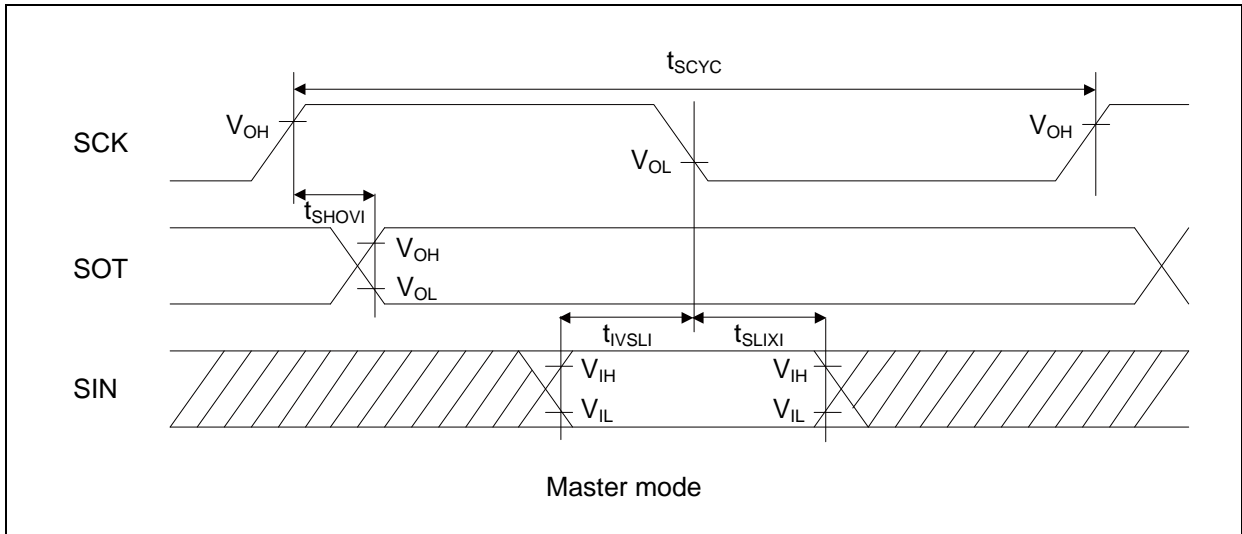

- CSIO (SPI = 0, SCINV = 1)

( $V_{CC} = 2.7V$  to  $5.5V$ ,  $V_{SS} = 0V$ ,  $T_A = -40^{\circ}C$  to  $+85^{\circ}C$ )

STOP condition setup time SCL ↑ → SDA ↑	t <sub>SUSTO</sub>		4.0	-	0.6	-	μs	
Bus free time between STOP condition and START condition	t <sub>BUF</sub>		4.7	-	1.3	-	μs	
Noise filter	t <sub>SP</sub>		8 MHz ≤ t <sub>CYCP</sub> ≤ 40 MHz	2 t <sub>CYCP</sub> * <sup>4</sup>	-	2 t <sub>CYCP</sub> * <sup>4</sup>	-	ns
		40 MHz < t <sub>CYCP</sub> ≤ 60 MHz	3 t <sub>CYCP</sub> * <sup>4</sup>	-	3 t <sub>CYCP</sub> * <sup>4</sup>	-	ns	*5
		60 MHz < t <sub>CYCP</sub> ≤ 72 MHz	4 t <sub>CYCP</sub> * <sup>4</sup>	-	4 t <sub>CYCP</sub> * <sup>4</sup>	-	ns	*5

- \*1: R and C represent the pull-up resistance and load capacitance of the SCL and SDA lines, respectively.  
V<sub>p</sub> indicates the power supply voltage of the pull-up resistance and I<sub>OL</sub> indicates V<sub>OL</sub> guaranteed current.
- \*2: The maximum t<sub>HDDAT</sub> must satisfy that it doesn't extend at least L period (t<sub>LOW</sub>) of device's SCL signal.
- \*3: Fast-mode I<sup>2</sup>C bus device can be used on Standard-mode I<sup>2</sup>C bus system as long as the device satisfies the requirement of t<sub>SUDAT</sub> ≥ 250 ns.
- \*4: t<sub>CYCP</sub> is the APB bus clock cycle time.  
About the APB bus number that I2C is connected to, see ■Block Diagram in this data sheet.  
To use Standard-mode, set the APB bus clock at 2 MHz or more.  
To use Fast-mode, set the APB bus clock at 8 MHz or more.
- \*5: The number of the steps of the noise filter can be changed by register settings.  
Change the number of the noise filter steps according to APB2 bus clock frequency.

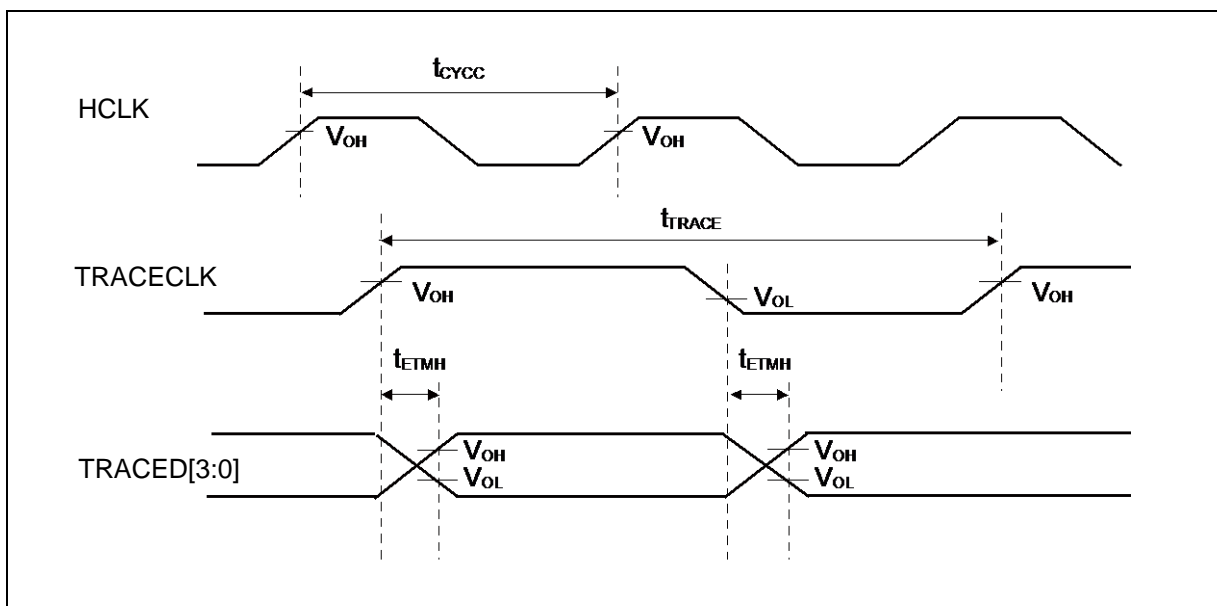

(13) ETM Timing

( $V_{CC} = 2.7V$  to  $5.5V$ ,  $V_{SS} = 0V$ ,  $T_A = -40^{\circ}C$  to  $+85^{\circ}C$ )

Parameter	Symbol	Pin name	Conditions	Value		Unit	Remarks
				Min	Max		
Data hold	$t_{ETMH}$	TRACECLK TRACED[3:0]	$V_{CC} \geq 4.5V$	2	9	ns	
			$V_{CC} < 4.5V$	2	15

Analog input voltage	-	AN <sub>XX</sub>	AV <sub>SS</sub>	-	AVRH	V	
Reference voltage	-	AVRH	2.7	-	AV <sub>CC</sub>	V	

\*1: Conversion time is the value of sampling time (t<sub>s</sub>) + compare time (t<sub>c</sub>).

The condition of the minimum conversion time is the following.

AV<sub>CC</sub> ≥ 4.5 V, HCLK=120 Hz sampling time: 300 ns, compare time: 700 nsAV<sub>CC</sub> < 4.5 V, HCLK=120 Hz sampling time: 500 ns, compare time: 700 nsEnsure that it satisfies the value of sampling time (t<sub>s</sub>) and compare clock cycle (t<sub>CCK</sub>).For setting\*<sup>4</sup> of sampling time and compare clock cycle, see CHAPTER 1-1: 12-bit A/D Converter in FM3 Family PERIPHERAL MANUAL Analog Macro Part.

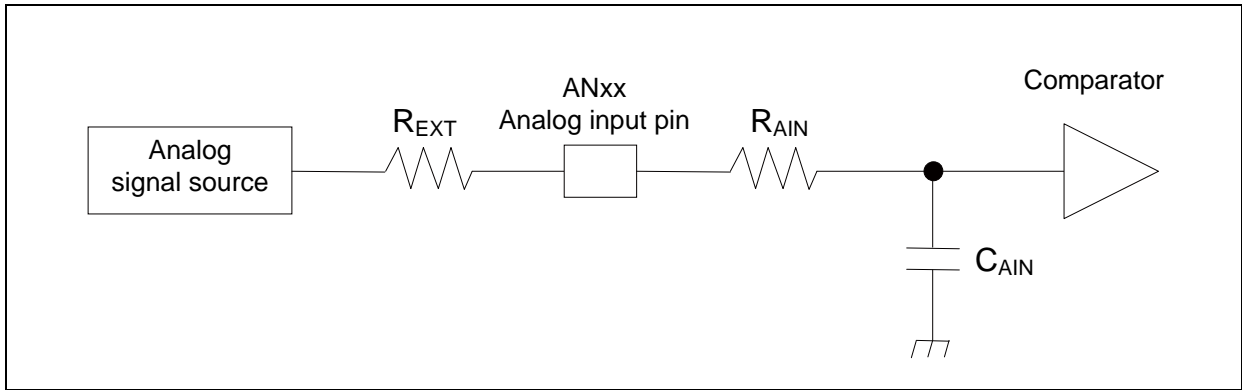

A/D Converter register is set at APB bus clock timing. Sampling and compare clock is set at Base clock (HCLK).

About the APB bus number which the A/D Converter is connected to, see ■Block Diagram in this data sheet.

\*2: A necessary sampling time changes by external impedance.

Ensure that it set the sampling time to satisfy (Equation 1).

\*3: Compare time (t<sub>c</sub>) is the value of (Equation 2).

(Equation 1)  $t_S \geq (R_{AIN} + R_{EXT}) \times C_{AIN} \times 9$

$t_S$ : Sampling time

$R_{AIN}$ : input resistance of A/D = 2 k $\Omega$  at 4.5 V  $\leq AV_{CC} \leq$  5.5 V  
input resistance of A/D = 3.8 k $\Omega$  at 2.7 V  $\leq AV_{CC} \leq$  4.5 V

$C_{AIN}$ : input capacity of A/D = 12.9 pF at 2.7 V  $\leq AV_{CC} \leq$  5.5 V

$R_{EXT}$ : Output impedance of external circuit

(Equation 2)  $t_C = t_{CCK} \times 14$

$t_C$ : Compare time

$t_{CCK}$ : Compare clock cycle

• Definition of 12-bit A/D Converter Terms

- Resolution: Analog variation that is recognized by an A/D converter.
- Integral Nonlinearity: Deviation of the line between the zero-transition point (0b000000000000  $\longleftrightarrow$  0b000000000001) and the full-scale transition point (0b111111111110  $\longleftrightarrow$  0b111111111111) from the actual conversion characteristics.
- Differential Nonlinearity: Deviation from the ideal value of the input voltage that is required to change the output code by 1 LSB.

### 6. USB Characteristics

( $V_{CC} = 2.7V$  to  $5.5V$ ,  $USBV_{CC} = 3.0V$  to  $3.6V$ ,  $V_{SS} = 0V$ ,  $T_A = -40^{\circ}C$  to  $+85^{\circ}C$ )

Parameter	Symbol	Pin name	Conditions	Value		Unit	Remarks
				Min	Max		
Input characteristics	Input H level voltage	$V_{IH}$	-	2.0	$USBV_{CC} + 0.3$	V	*1
	Input L level voltage	$V_{IL}$	-	$V_{SS} - 0.3$	0.8	V	*1
	Differential input sensitivity	$V_{DI}$	-	0.2	-	V	*2
	Different common mode input voltage	$V_{CM}$	-	0.8	2.5	V	*2
Output characteristics	Output H level voltage	$V_{OH}$	External pull-down resistance = $15\text{ k}\Omega$	2.8	3.6	V	*3
	Output L level voltage	$V_{OL}$	External pull-up resistance = $1.5\text{ k}\Omega$	0.0	0.3	V	*3
	Crossover voltage	$V_{CRS}$	-	1.3	2.0	V	*4
	Rise time	$t_{FR}$	Full-Speed	4	20	ns	*5
	Fall time	$t_{FF}$	Full-Speed	4	20	ns	*5
	Rise/ fall time matching	$t_{FRFM}$	Full-Speed	90	111.11	%	*5
	Output impedance	$Z_{DRV}$	Full-Speed	28	44	$\Omega$	*6
	Rise time	$t_{LR}$	Low-Speed	75	300	ns	*7
	Fall time	$t_{LF}$	Low-Speed	75	300	ns	*7
	Rise/ fall time matching	$t_{LRFM}$	Low-Speed	80	125	%	*7

\*1: The switching threshold voltage of Single-End-Receiver of USB I/O buffer is set as within  $V_{IL}$  (Max) = 0.8 V,  $V_{IH}$  (Min) = 2.0 V (TTL input standard).

There are some hystereses to lower noise sensitivity.

\*2: Use differential-Receiver to receive USB differential data signal.

Differential-Receiver has 200 mV of differential input sensitivity when the differential data input is within 0.8 V to 2.5 V to the local ground reference level.

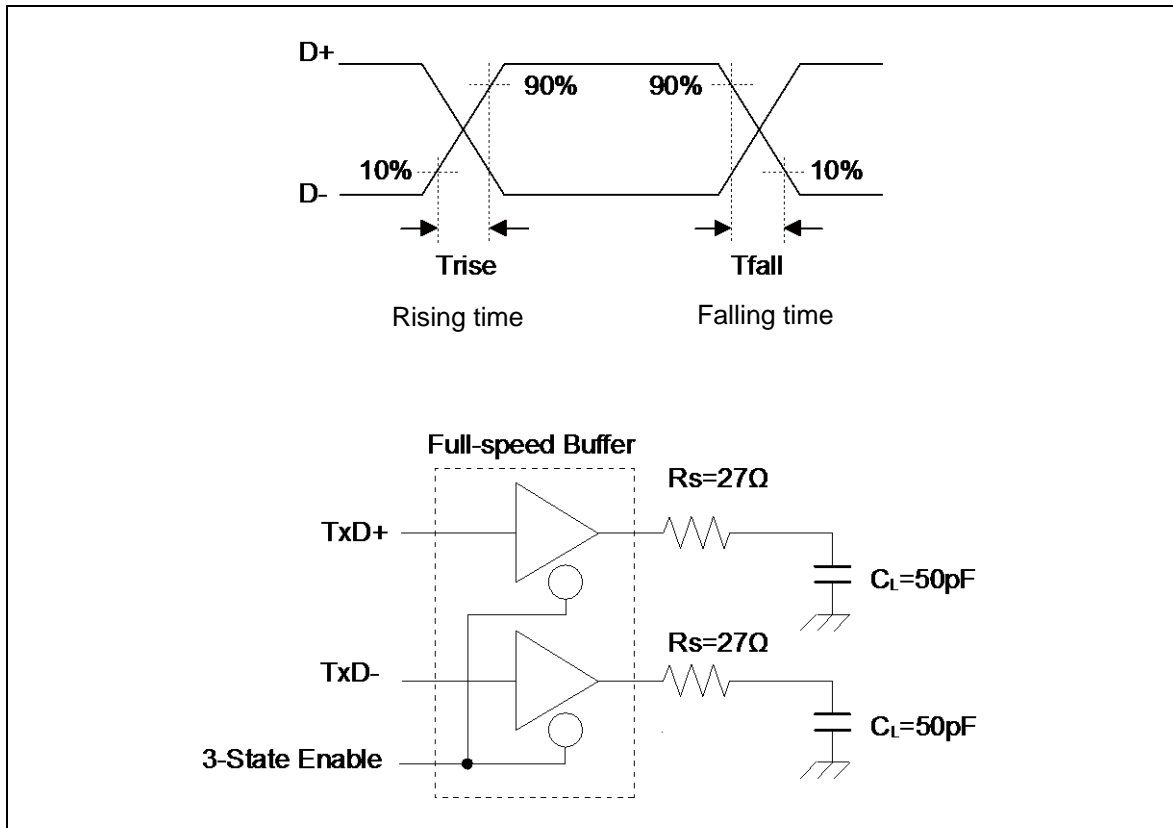

Above voltage range is the common mode input voltage range.

- \*3: The output drive capability of the driver is below 0.3 V at Low-State ( $V_{OL}$ ) (to 3.6 V and 1.5 k $\Omega$  load), and 2.8 V or above (to the VSS and 1.5 k $\Omega$  load) at High-State ( $V_{OH}$ ).
- \*4: The cross voltage of the external differential output signal (D + /D -) of USB I/O buffer is within 1.3 V to 2.0 V.

- \*5: They indicate rise time ( $T_{rise}$ ) and fall time ( $T_{fall}$ ) of the full-speed differential data signal. They are defined by the time between 10% and 90% of the output signal voltage. For full-speed buffer,  $T_r/T_f$  ratio is regulated as within  $\pm 10\%$  to minimize RFI emission.

- \*6: USB Full-speed connection is performed via twist pair cable shield with  $90\ \Omega \pm 15\%$  characteristic impedance (Differential Mode).  
 USB standard defines that output impedance of USB driver must be in range from  $28\ \Omega$  to  $44\ \Omega$ . So, discrete series resistor ( $R_s$ ) addition is defined in order to satisfy the above definition and keep balance.  
 When using this USB I/O, use it with  $25\ \Omega$  to  $30\ \Omega$  (recommendation value  $27\ \Omega$ ) Series resistor  $R_s$ .

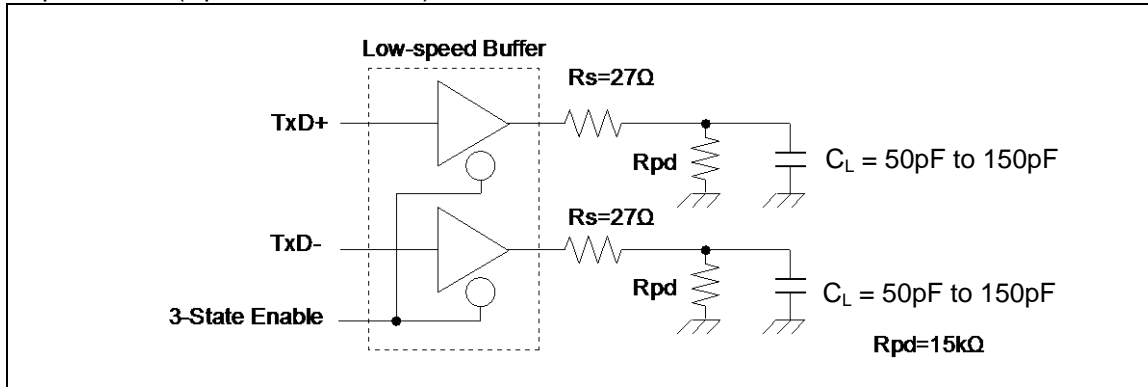

- \*7: They indicate rise time ( $T_{rise}$ ) and fall time ( $T_{fall}$ ) of the low-speed differential data signal. They are defined by the time between 10% and 90% of the output signal voltage.

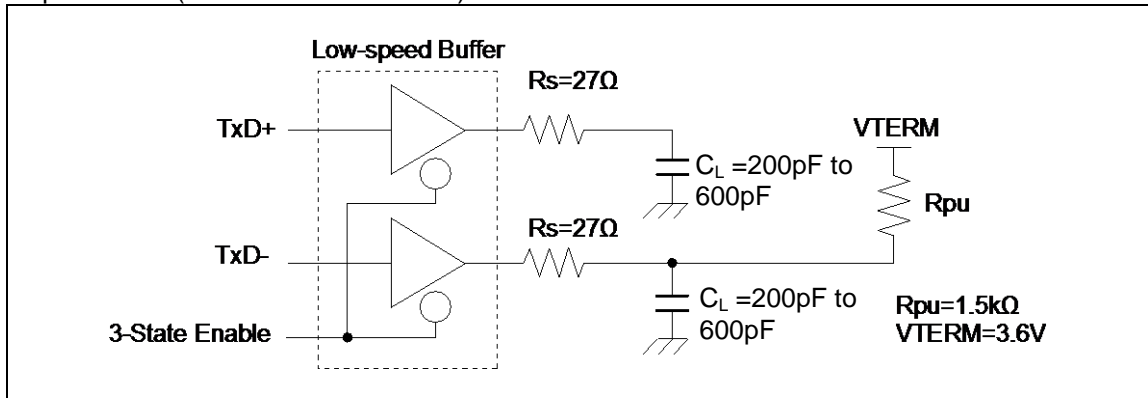

See Figure • Low-Speed Load (Compliance Load) for conditions of external load.

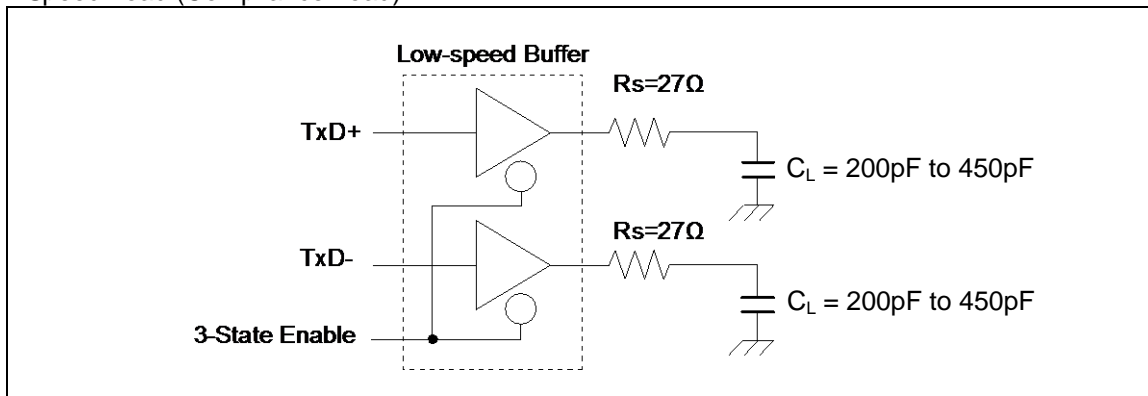

• Low-Speed Load (Upstream Port Load) - Reference 1

• Low-Speed Load (Downstream Port Load) - Reference 2

• Low-Speed Load (Compliance Load)

## 7. Low-Voltage Detection Characteristics

### (1) Low-Voltage Detection Reset

(T<sub>A</sub> = - 40°C to + 85°C)

Parameter	Symbol	Conditions	Value			Unit	Remarks
			Min	Typ	Max

LVD stabilization wait time	t <sub>LVDW</sub>	-	-	-	4032 × t <sub>CYCP</sub> *	μs	

\*: t<sub>CYCP</sub> indicates the APB2 bus clock cycle time.

## 8. MainFlash Memory Write/Erase Characteristics

### (1) Write / Erase time

( $V_{CC} = 2.7V$  to  $5.5V$ ,  $T_A = -40^{\circ}C$  to  $+85^{\circ}C$ )

Parameter		Value		Unit	Remarks
		Typ*	Max*		
Sector erase time	Large Sector	0.7	3.7	s	Includes write time prior to internal erase
	Small Sector	0.3	1.1		
Half word (16-bit) write time		12	384	$\mu s$	Not including system-level overhead time
Chip erase time		8	38.4	s	Includes write time prior to internal erase

\*: The typical value is immediately after shipment, the maximum value is guarantee value under 100,000 cycle of erase/write.

### (2) Erase/write cycles and data hold time

Erase/write cycles (cycle)	Data hold time (year)	Remarks
1,000	20*	
10,000	10*	
100,000	5*	

\*: At average  $+85^{\circ}C$

## 9. WorkFlash Memory Write/Erase Characteristics

### (1) Write / Erase time

( $V_{CC} = 2.7V$  to  $5.5V$ ,  $T_A = -40^{\circ}C$  to  $+85^{\circ}C$ )

Parameter		Value		Unit	Remarks
		Typ*	Max*		
Sector erase time		0.3	1.5	s	Includes write time prior to internal erase
Half word (16-bit) write time		20	384	$\mu s$	Not including system-level overhead time
Chip erase time		1.2	6	s	Includes write time prior to internal erase

\*: The typical value is immediately after shipment, the maximum value is guarantee value under 10,000 cycle of erase/write.

### (2) Erase/write cycles and data hold time

Erase/write cycles (cycle)	Data hold time (year)	Remarks
1,000	20*	
10,000	10*	

\*: At average  $+85^{\circ}C$

### 10. Return Time from Low-Power Consumption Mode

#### (1) Return Factor: Interrupt

The return time from Low-Power consumption mode is indicated as follows. It is from receiving the return factor to starting the program operation.

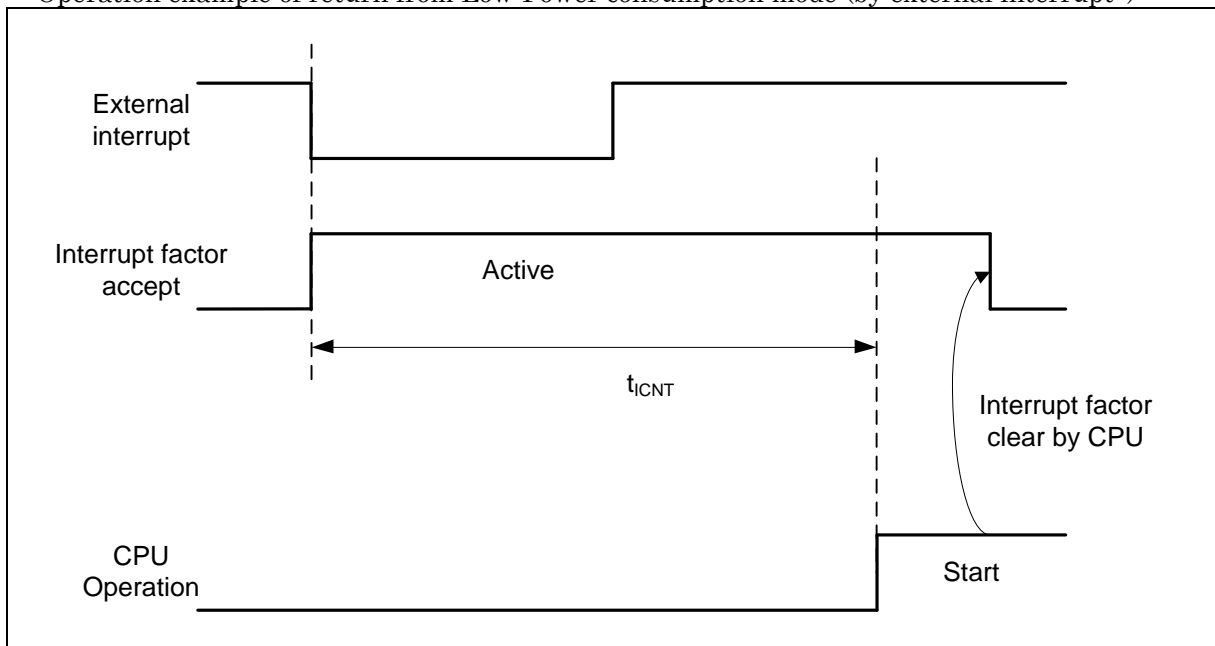

- Return Count Time

( $V_{CC} = 2.7V$  to  $5.5V$ ,  $T_A = -40^{\circ}C$  to  $+85^{\circ}C$ )

Parameter	Symbol	Value		Unit	Remarks
		Typ	Max*		
Sleep mode	$t_{ICNT}$	$t_{CYCC}$		ns	
High-speed CR Timer mode, Main Timer mode, PLL Timer mode		40	80	$\mu s$	
Low-speed CR Timer mode		453	737	$\mu s$	
Sub Timer mode		453	737	$\mu s$	
Stop mode		453	737	$\mu s$	

\*: The maximum value depends on the accuracy of built-in CR.

- Operation example of return from Low-Power consumption mode (by external interrupt\*)

\*: External interrupt is set to detecting fall edge.

- Operation example of return from Low-Power consumption mode (by internal resource interrupt\*)

\*: Internal resource interrupt is not included in return factor by the kind of Low-Power consumption mode.

- Notes:
- The return factor is different in each Low-Power consumption modes. See "CHAPTER 6: Low Power Consumption Mode and Operations of Standby Modes" in "FM3 Family PERIPHERAL MANUAL" about the return factor from Low-Power consumption mode.
  - When interrupt recovers, the operation mode that CPU recovers depends on the state before the Low-Power consumption mode transition. See "CHAPTER 6: Low Power Consumption Mode" in "FM3 Family PERIPHERAL MANUAL".

(2) Return Factor: Reset

The return time from Low-Power consumption mode is indicated as follows. It is from releasing reset to starting the program operation.

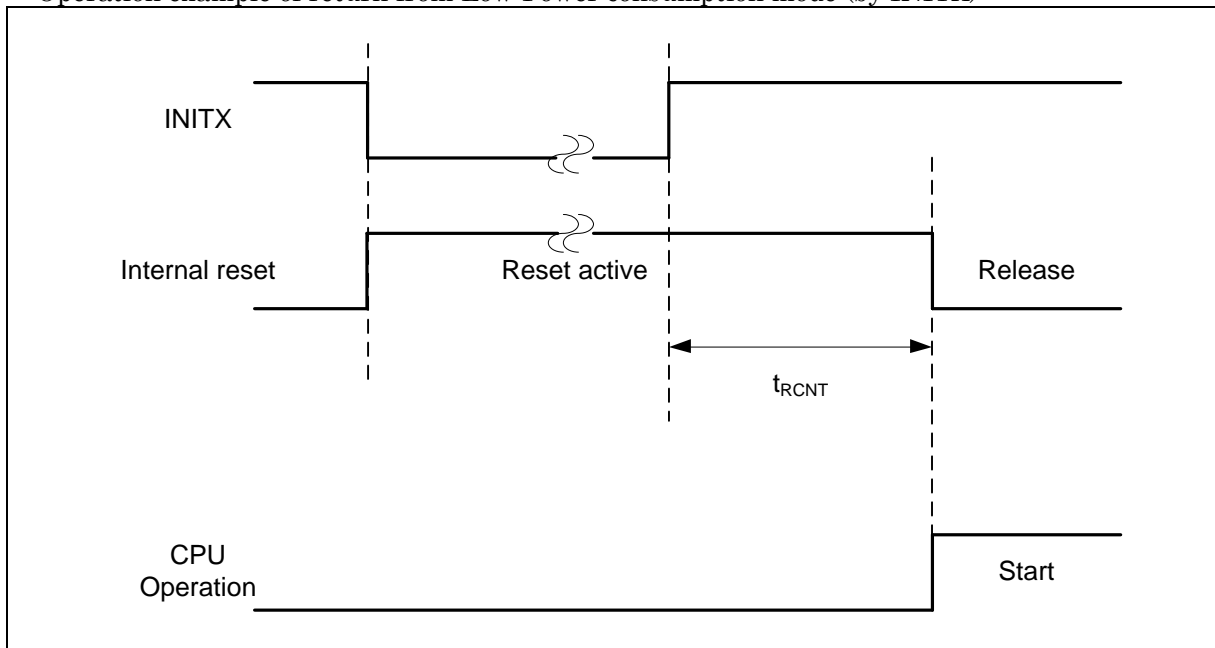

- Return Count Time

( $V_{CC} = 2.7V$  to  $5.5V$ ,  $T_A = -40^{\circ}C$  to  $+85^{\circ}C$ )

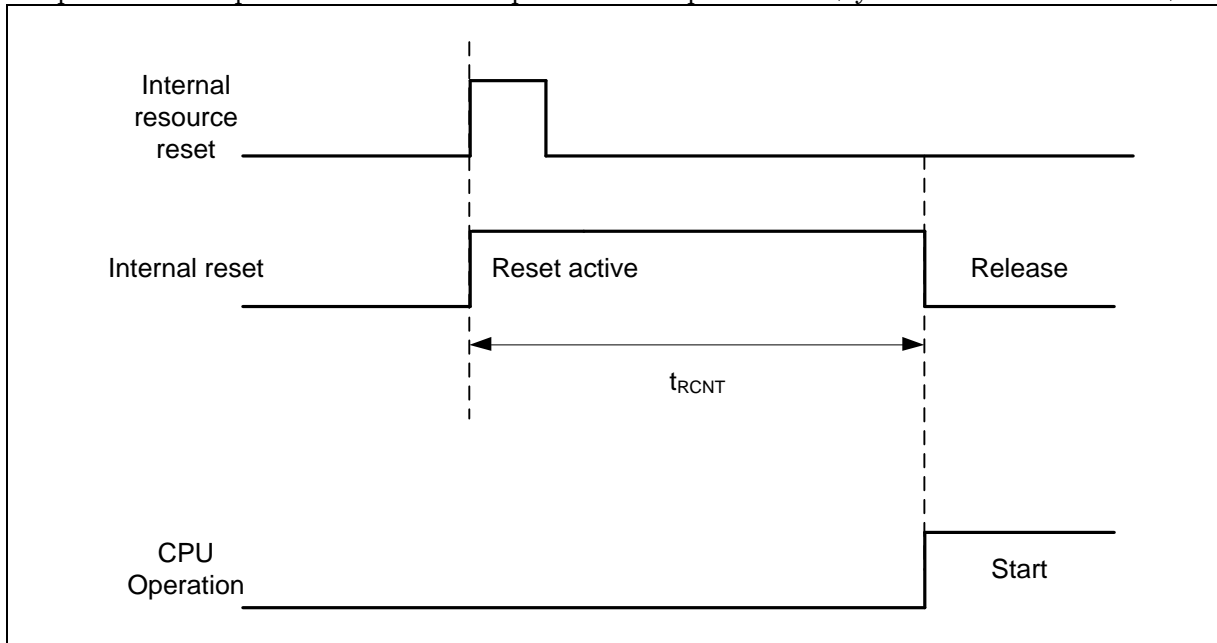

Parameter	Symbol	Value		Unit	Remarks
		Typ	Max*		
Sleep mode	$t_{RCNT}$	321	461	$\mu s$	
High-speed CR Timer mode, Main Timer mode, PLL Timer mode		321	461	$\mu s$	
Low-speed CR Timer mode		441	701	$\mu s$	
Sub Timer mode		441	701	$\mu s$	
Stop mode		441	701	$\mu s$	

\*: The maximum value depends on the accuracy of built-in CR.

- Operation example of return from Low-Power consumption mode (by INITX)

- Operation example of return from low power consumption mode (by internal resource reset\*)

\*: Internal resource reset is not included in return factor by the kind of Low-Power consumption mode.

- Notes:
- The return factor is different in each Low-Power consumption modes. See "CHAPTER 6: Low Power Consumption Mode and Operations of Standby Modes" in "FM3 Family PERIPHERAL MANUAL".
  - When interrupt recovers, the operation mode that CPU recovers depends on the state before the Low-Power consumption mode transition. See "CHAPTER 6: Low Power Consumption Mode" in "FM3 Family PERIPHERAL MANUAL".
  - The time during the power-on reset/low-voltage detection reset is excluded. See "(6) Power-on Reset Timing" in "4. AC Characteristics" in "■ Electrical Characteristics" for the detail on the time during the power-on reset/low-voltage detection reset.
  - When in recovery from reset, CPU changes to the High-speed CR Run mode. When using the main clock or the PLL clock, it is necessary to add the main clock oscillation stabilization wait time or the Main PLL clock stabilization wait time.
  - The internal resource reset means the watchdog reset and the CSV reset.

■ Ordering Information

Part number	On-chip Flash memory	On-chip SRAM	Package	Packing
MB9BF312NPQC-JNE2	Main: 128 Kbyte Work: 32 Kbyte	8 Kbyte	Plastic • QFP 100-pin (0.65 mm pitch), (FPT-100P-M03)	Tray
MB9BF314NPQC-JNE2	Main: 256 Kbyte Work: 32 Kbyte	16 Kbyte		
MB9BF315NPQC-JNE2	Main: 384 Kbyte Work: 32 Kbyte	24 Kbyte		
MB9BF316NPQC-JNE2	Main: 512 Kbyte Work: 32 Kbyte	32 Kbyte		
MB9BF312NPMC-JNE2	Main: 128 Kbyte Work: 32 Kbyte	8 Kbyte	Plastic • LQFP 100-pin (0.5 mm pitch), (FPT-100P-M23)	
MB9BF314NPMC-JNE2	Main: 256 Kbyte Work: 32 Kbyte	16 Kbyte		
MB9BF315NPMC-JNE2	Main: 384 Kbyte Work: 32 Kbyte	24 Kbyte		
MB9BF316NPMC-JNE2	Main: 512 Kbyte Work: 32 Kbyte	32 Kbyte		
MB9BF312RPMC-JNE2	Main: 128 Kbyte Work: 32 Kbyte	8 Kbyte	Plastic • LQFP 120-pin (0.5 mm pitch), (FPT-120P-M37)	
MB9BF314RPMC-JNE2	Main: 256 Kbyte Work: 32 Kbyte	16 Kbyte		
MB9BF315RPMC-JNE2	Main: 384 Kbyte Work: 32 Kbyte	24 Kbyte		
MB9BF316RPMC-JNE2	Main: 512 Kbyte Work: 32 Kbyte	32 Kbyte		
MB9BF312NBGL-GE1	Main: 128 Kbyte Work: 32 Kbyte	8 Kbyte	Plastic • PFBGA 112-pin (0.8 mm pitch), (BGA-112P-M04)	
MB9BF314NBGL-GE1	Main: 256 Kbyte Work: 32 Kbyte	16 Kbyte		
MB9BF315NBGL-GE1	Main: 384 Kbyte Work: 32 Kbyte	24 Kbyte		
MB9BF316NBGL-GE1	Main: 512 Kbyte Work: 32 Kbyte	32 Kbyte		

■ Package Dimensions

<p>100-pin plastic LQFP</p> <p>(FPT-100P-M23)</p>	Lead pitch	0.50 mm
	Package width × package length	14.00 mm × 14.00 mm
	Lead shape	Gullwing
	Lead bend direction	Normal bend
	Sealing method	Plastic mold
	Mounting height	1.70 mm MAX
	Weight	0.65 g

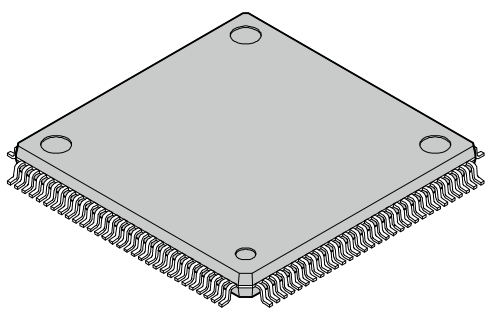

100-pin plastic LQFP (FPT-100P-M23)

Note 1) \* : These dimensions do not include resin protrusion.  
 Note 2) Pins width and pins thickness include plating thickness.  
 Note 3) Pins width do not include tie bar cutting remainder.

10	<ul style="list-style-type: none"> <li>■ Packages</li> </ul>	Deleted the description of ES
28, 29	<ul style="list-style-type: none"> <li>■ List of Pin Functions</li> <li>· List of pin numbers</li> </ul>	Modified I/O circuit type of P63 to P68
48, 50	<ul style="list-style-type: none"> <li>■ I/O Circuit Type</li> </ul>	Added the description of I2C to the type of E, F and I
48, 49	<ul style="list-style-type: none"> <li>■ I/O Circuit Type</li> </ul>	Added about +B input
55	<ul style="list-style-type: none"> <li>■ Handling Devices</li> </ul>	Added "□ Stabilizing power supply voltage"
55	<ul style="list-style-type: none"> <li>■ Handling Devices</li> <li>● Crystal oscillator circuit</li> </ul>	Added the following description "Evaluate oscillation of your using crystal oscillator by your mount board."
56	<ul style="list-style-type: none"> <li>■ Handling Devices</li> <li>● C Pin</li> </ul>	Changed the description
57	<ul style="list-style-type: none"> <li>■ Block Diagram</li> </ul>	Modified the block diagram
58	<ul style="list-style-type: none"> <li>■ Memory Map</li> <li>· Memory map(1)</li> </ul>	Modified the area of "External Device Area"
59, 60	<ul style="list-style-type: none"> <li>■ Memory Map</li> <li>· Memory map(2)(3)</li> </ul>	Added the summary of Flash memory sector and the note
67, 68	<ul style="list-style-type: none"> <li>■ Electrical Characteristics</li> <li>1. Absolute Maximum Ratings</li> </ul>	<ul style="list-style-type: none"> <li>· Added the Clamp maximum current</li> <li>· Added the output current of P80 and P81</li> <li>· Added about +B input</li> </ul>
69	<ul style="list-style-type: none"> <li>■ Electrical Characteristics</li> <li>2. Recommended Operation Conditions</li> </ul>	<ul style="list-style-type: none"> <li>· Modified the minimum value of Analog reference voltage</li> <li>· Added Smoothing capacitor</li> <li>· Added the note about less than the minimum power supply voltage</li> </ul>
70, 71	<ul style="list-style-type: none"> <li>■ Electrical Characteristics</li> <li>3. DC Characteristics</li> <li>(1) Current rating</li> </ul>	<ul style="list-style-type: none"> <li>· Changed the table format</li> <li>· Added Main TIMER mode current</li> <li>· Added Flash Memory Current</li> <li>· Moved A/D Converter Current</li> <li>· Modified the unit of low voltage detection circuit (LVD) power supply current</li> </ul>
74	<ul style="list-style-type: none"> <li>■ Electrical Characteristics</li> <li>4. AC Characteristics</li> <li>(1) Main Clock Input Characteristics</li> </ul>	Added Master clock at Internal operating clock frequency
75	<ul style="list-style-type: none"> <li>■ Electrical Characteristics</li> <li>4. AC Characteristics</li> <li>(3) Built-in CR Oscillation Characteristics</li> </ul>	Added Frequency stability time at Built-in high-speed CR
76	<ul style="list-style-type: none"> <li>■ Electrical Characteristics</li> <li>4. AC Characteristics</li> <li>(4-1) Operating Conditions of Main and USB PLL</li> <li>(4-2) Operating Conditions of Main PLL</li> </ul>	<ul style="list-style-type: none"> <li>· Added Main PLL clock frequency</li> <li>· Added USB clock frequency</li> <li>· Added the figure of Main PLL connection and USB PLL connection</li> </ul>
77	<ul style="list-style-type: none"> <li>■ Electrical Characteristics</li> <li>4. AC Characteristics</li> <li>(6) Power-on Reset Timing</li> </ul>	<ul style="list-style-type: none"> <li>· Added Time until releasing Power-on reset</li> <li>· Changed the figure of timing</li> </ul>
79-81	<ul style="list-style-type: none"> <li>■ Electrical Characteristics</li> <li>4. AC Characteristics</li> <li>(7) External Bus Timing</li> </ul>	Modified Data output time
89-96	<ul style="list-style-type: none"> <li>■ Electrical Characteristics</li> <li>4. AC Characteristics</li> <li>(8) CSIO/UART Timing</li> </ul>	<ul style="list-style-type: none"> <li>· Modified from UART Timing to CSIO/UART Timing</li> <li>· Changed from Internal shift clock operation to Master mode</li> <li>· Changed from External shift clock operation to Slave mode</li> </ul>

Page	Section	Change Results
103	■Electrical Characteristics 5. 12bit A/D Converter	· Added the typical value of Integral Nonlinearity, Differential Nonlinearity, Zero transition voltage and Full-scale transition voltage · Modified Stage transition time to operation permission · Modified the minimum value of Reference voltage
110	■Electrical Characteristics 7. Low-voltage Detection Characteristics (2) Interrupt of Low-voltage Detection	Modified LVD stabilization wait time
111	■Electrical Characteristics 9. WorkFlash Memory Write/Erase Characteristics (1) Write / Erase time	· Modified sector erase time · Modified half word(16-bit) write time
112-115	■Electrical Characteristics 9. Return Time from Low-Power Consumption Mode	Added Return Time from Low-Power Consumption Mode
116	■Ordering Information	Change to full part number
117-120	■Package Dimensions	Deleted FPT-100P-M20 and FPT-120P-M21

**Colophon**

The products described in this document are designed, developed and manufactured as contemplated for general use, including without limitation, ordinary industrial use, general office use, personal use, and household use, but are not designed, developed and manufactured as contemplated (1) for any use that includes fatal risks or dangers that, unless extremely high safety is secured, could have a serious effect to the public, and could lead directly to death, personal injury, severe physical damage or other loss (i.e., nuclear reaction control in nuclear facility, aircraft flight control, air traffic control, mass transport control, medical life support system, missile launch control in weapon system), or (2) for any use where chance of failure is intolerable (i.e., submersible repeater and artificial satellite). Please note that Spansion will not be liable to you and/or any third party for any claims or damages arising in connection with above-mentioned uses of the products. Any semiconductor devices have an inherent chance of failure. You must protect against injury, damage or loss from such failures by incorporating safety design measures into your facility and equipment such as redundancy, fire protection, and prevention of over-current levels and other abnormal operating conditions. If any products described in this document represent goods or technologies subject to certain restrictions on export under the Foreign Exchange and Foreign Trade Law of Japan, the US Export Administration Regulations or the applicable laws of any other country, the prior authorization by the respective government entity will be required for export of those products.

**Trademarks and Notice**

The contents of this document are subject to change without notice. This document may contain information on a Spansion product under development by Spansion. Spansion reserves the right to change or discontinue work on any product without notice. The information in this document is provided as is without warranty or guarantee of any kind as to its accuracy, completeness, operability, fitness for particular purpose, merchantability, non-infringement of third-party rights, or any other warranty, express, implied, or statutory. Spansion assumes no liability for any damages of any kind arising out of the use of the information in this document.
